A note before you start

This guide was written for anyone who needs to understand the Lenni Borrower website — whether you are a commercial borrower shopping for a bank, a Lenni teammate explaining the product, or a developer who needs to update and redeploy the site.

It walks through every section of the live website in plain English. Where it helps, we explain why we built something a certain way, not just what it does.

The site lives here:

<http://lenni-borrower.s3-website.us-east-2.amazonaws.com>

As of June 24, 2026, it contains 470 pages, 351 bank profiles, and about 478 files on AWS. All loan portfolio numbers come from FFIEC Call Reports for the period ending 12/31/2025.

If you only read one section besides the introduction, read Section 15 (step-by-step borrower workflows) or the deployment and infrastructure sections (hosting overview through current architecture vs production target) depending on your role.

What problem does this website solve?

If you have ever tried to find a Texas bank for a commercial loan, you know the usual process: Google around, click through generic bank websites, call a 1-800 number, and hope the person on the other end actually lends on your deal type.

The problem is that bank websites tell you what they want you to hear. They rarely tell you what they actually hold on their balance sheet.

Every insured bank in America files a quarterly Call Report with the federal government. That filing includes a detailed breakdown of the bank's loan portfolio — how much is in apartments, warehouses, business lines of credit, farmland, credit cards, and so on. It is public data. Almost nobody outside banking uses it.

Lenni Borrower reads that data for 351 Texas banks and ranks them by portfolio concentration. If a bank has 18% of its loans in multifamily apartments, that is a strong signal they understand apartment deals. If they have 2%, they might still lend to you — but they are not a specialist.

The site does not replace a loan officer. It does not quote rates or approve loans. What it does is save you weeks of blind outreach by showing you where to start.

Who should use this site?

BORROWERS (primary audience)

Real estate investors looking at apartments, offices, warehouses, retail centers, or hotels.

Business owners who need a working capital line, equipment loan, or acquisition financing.

Farmers and ranch operators shopping for land or operating credit.

Anyone who wants to walk into a first bank meeting prepared.

BROKERS AND ADVISORS

Commercial mortgage brokers building a lender list for a specific deal type.

CPAs and attorneys whose clients need bank introductions.

LENNI TEAM AND PARTNERS

Sales team identifying community banks in the 500M–2B sweet spot.

CLOs evaluating whether a bank is a portfolio fit before a first call.

RESEARCHERS AND AI SYSTEMS

The site publishes sitemap.xml, robots.txt, llms.txt, and JSON data files specifically so search engines and large language models can index and cite the content accurately.

WHO IT IS NOT FOR (today)

Home buyers looking for a 30-year residential mortgage — the focus is commercial.

People who want to submit a loan application through Lenni — you still contact the bank directly.

Anyone expecting live interest rates — rates are negotiated bank by bank and are not in Call Reports.

The data behind the site — explained without jargon

Three public data sources feed the website. You do not need to memorize regulatory codes to use the site, but understanding the sources helps you trust what you see.

SOURCE 1: FFIEC CALL REPORTS (the loan portfolio numbers)

Every quarter, Texas banks file a Call Report with the FFIEC Central Data Repository. Think of it as a standardized financial snapshot. The loan section breaks the portfolio into categories — multifamily, investor real estate, owner-occupied buildings, construction, business loans, consumer loans, and more.

The headline number is total loans (regulatory code RCON2122). Every percentage on the site is calculated as:

Category balance ÷ Total loans = Portfolio %

We call a bank a "specialist" in a category when that percentage is 8% or higher. At 15% or above, we consider them a deep specialist. These thresholds are industry convention for portfolio analysis, not a Lenni invention.

Reporting period on the live site: 12/31/2025

SOURCE 2: FDIC BANKFIND (institution and branch data)

The FDIC publishes institution records with headquarters addresses, website URLs, deposit totals, charter types, and whether the bank qualifies as a "community bank" under FDIC criteria. Branch location files add street addresses for thousands of Texas offices.

This matters because a bank might be headquartered in Dallas but have branches in Waco, Tyler, and Longview. Borrowers in those cities should not ignore a Dallas HQ bank if it has local branches.

SOURCE 3: BANK WEBSITE SCRAPING (contact enrichment)

The data behind the site — explained without jargon (continued)

For 255 banks, we also captured publicly available information from their websites — phone numbers, short about-text, links to commercial banking pages, and FAQ excerpts where available. This is labeled with a capture date and links back to the source page. We take short excerpts only; full content stays on the bank's site.

WHAT WE DO NOT HAVE

Interest rates, LTV limits, credit score minimums, loan officer names, or online application status. Those require a direct conversation with the bank.

Home page — your starting point

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/index.html>

The home page is a single interactive application embedded in one HTML file (about 1 MB). It loads instantly and works without a server — all bank data is embedded in the page.

WHAT YOU SEE WHEN YOU ARRIVE

A green banner at the top shows live stats: 351 Texas banks, reporting period 12/31/2025, and 105 banks in the community-bank sweet spot (500M–2B assets).

Below that, quick links to Texas Market, Insights, Stories, Playbook, Glossary, and the machine-readable llms.txt file.

THE MAIN HEADLINE reads: "Find the bank that already lends like your deal." That is the whole point of the site.

"MATCH MY DEAL" SEARCH BAR

This is the most important interactive feature. Paste listing text from Zillow, LoopNet, or Crexi — or just describe your deal in plain English:

"40-unit apartment bridge in Dallas, \$4M" or "working capital line for a SaaS company in Austin."

The system parses your text, suggests loan product matches, ranks banks by portfolio fit, and opens a Borrower Workspace with preparation steps. See the dedicated "Match my deal" sections later in this guide for example searches, what gets matched, and current limitations.

NAVIGATION TABS

Home — overview and hero search

Loan Types — browse seven loan categories interactively

Find Banks — filter all 351 banks by metro, size, and specialty

AI Terminal — type questions in plain English (keyword-based routing today)

Home page — your starting point (continued)

WHEN YOU CLICK A BANK in the interactive view, you are taken to the full static profile page. Those pages have more detail — branch tables, enrichment, SEO metadata — and are better for sharing a direct link with a colleague.

Loan guide: Multifamily (5+ units)

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/multifamily.html>

Acquisition, refinance, and bridge financing for apartment buildings of five or more units.

This category maps to specific lines on the bank's Call Report: RCON1460 — real estate loans secured by multifamily (5+) residential properties

WHY THIS CATEGORY MATTERS

Multifamily loans finance apartment properties with five or more units. Texas community banks report balances on Schedule RC-C line RCON1460. Banks with a high multifamily share actively lend on value-add, bridge, and permanent apartment deals.

SUB-GUIDES UNDER THIS CATEGORY (5 pages)

Each sub-guide is written for a specific deal situation — not just the parent category. For example, under Investor CRE you will find separate guides for office buildings, retail strips, industrial warehouses, mixed-use properties, and NNN single-tenant deals. The underwriting story, document checklist, and opening script differ for each.

- Apartment acquisition loan — Purchase financing for stabilized or light value-add apartment properties of five or more units.
- Multifamily refinance — Replace existing apartment debt with new bank financing — rate/term or cash-out.
- Apartment bridge loan — Short-term financing between acquisition and permanent refinance or sale.
- Multifamily value-add / rehab — Financing for renovations, unit upgrades, and repositioning of apartment communities.
- Multifamily permanent takeout — Long-term loan that replaces construction or bridge financing after stabilization.

Loan guide: Multifamily (5+ units) (continued)

WHAT EVERY SUB-GUIDE INCLUDES

Who the loan is for (in plain English)

How community banks typically underwrite it

A checklist of documents to prepare before your first call

An opening script and questions to ask the lender

A live table of Texas banks ranked by portfolio % in this category

FAQ and links to related sub-types

The bank tables are not hand-curated. They are generated from Call Report data every time the site is rebuilt, so the rankings always reflect the latest filing.

Loan guide: Investor CRE (income property)

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/investor-cre.html>

Office, retail, industrial, and mixed-use held as investments and leased to tenants.

This category maps to specific lines on the bank's Call Report: RCONF161, RCONF162 — income-producing commercial real estate

WHY THIS CATEGORY MATTERS

Investor CRE is repaid primarily from tenant rent. Mapped from RCONF161 (other nonfarm nonresidential) and related commercial real estate lines. This is often the largest commercial bucket for Texas regionals.

SUB-GUIDES UNDER THIS CATEGORY (5 pages)

Each sub-guide is written for a specific deal situation — not just the parent category. For example, under Investor CRE you will find separate guides for office buildings, retail strips, industrial warehouses, mixed-use properties, and NNN single-tenant deals. The underwriting story, document checklist, and opening script differ for each.

- Investor office building loan — Financing for office properties leased to business tenants.
- Investor retail / strip center loan — Financing for retail pads, strip centers, and shopping centers leased to retailers.
- Investor industrial / warehouse loan — Financing for warehouses, distribution, and light industrial leased to operators.
- Mixed-use income property loan — Financing for properties combining retail, office, and/or residential income streams.
- NNN / single-tenant net lease loan — Financing for properties leased NNN to investment-grade or credit tenants.

Loan guide: Investor CRE (income property) (continued)

WHAT EVERY SUB-GUIDE INCLUDES

Who the loan is for (in plain English)

How community banks typically underwrite it

A checklist of documents to prepare before your first call

An opening script and questions to ask the lender

A live table of Texas banks ranked by portfolio % in this category

FAQ and links to related sub-types

The bank tables are not hand-curated. They are generated from Call Report data every time the site is rebuilt, so the rankings always reflect the latest filing.

Loan guide: Owner-Occupied CRE

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/owner-occupied-cre.html>

Financing for the building your own business operates from.

This category maps to specific lines on the bank's Call Report: RCONF160 — loans secured by owner-occupied nonfarm nonresidential properties

WHY THIS CATEGORY MATTERS

Owner-occupied CRE is underwritten on operating business cash flow. Reported as RCONF160. Community banks often pair these with SBA 504 for lower down payments.

SUB-GUIDES UNDER THIS CATEGORY (3 pages)

Each sub-guide is written for a specific deal situation — not just the parent category. For example, under Investor CRE you will find separate guides for office buildings, retail strips, industrial warehouses, mixed-use properties, and NNN single-tenant deals. The underwriting story, document checklist, and opening script differ for each.

- Owner-occupied property purchase — Buy the building your business will occupy.
- Owner-occupied refinance — Refinance debt on a building your business already owns and occupies.
- Owner-occupied + SBA 504 — Lower down payment structure pairing bank first mortgage with SBA 504 second.

WHAT EVERY SUB-GUIDE INCLUDES

Who the loan is for (in plain English)

How community banks typically underwrite it

A checklist of documents to prepare before your first call

An opening script and questions to ask the lender

A live table of Texas banks ranked by portfolio % in this category

FAQ and links to related sub-types

Loan guide: Owner-Occupied CRE (continued)

The bank tables are not hand-curated. They are generated from Call Report data every time the site is rebuilt, so the rankings always reflect the latest filing.

Loan guide: Commercial Construction

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/commercial-construction.html>

Ground-up construction and major renovation for commercial and multifamily projects.

This category maps to specific lines on the bank's Call Report: RCONF158, RCONF159 — construction and land development

WHY THIS CATEGORY MATTERS

Construction loans fund development draws and convert to permanent financing at completion. Mapped from RCONF158 (1–4 family construction) and RCONF159 (other construction & land development).

SUB-GUIDES UNDER THIS CATEGORY (4 pages)

Each sub-guide is written for a specific deal situation — not just the parent category. For example, under Investor CRE you will find separate guides for office buildings, retail strips, industrial warehouses, mixed-use properties, and NNN single-tenant deals. The underwriting story, document checklist, and opening script differ for each.

- Ground-up commercial construction — Finance new construction of commercial or multifamily buildings.
- Major commercial renovation — Substantial renovation or adaptive reuse of existing commercial buildings.
- Land development & lot loans — Finance horizontal development — roads, utilities, plats — for commercial or residential lots.
- Residential / commercial lot loans — Short-term loans on individual or small groups of developed lots pending vertical construction.

Loan guide: Commercial Construction (continued)

WHAT EVERY SUB-GUIDE INCLUDES

Who the loan is for (in plain English)

How community banks typically underwrite it

A checklist of documents to prepare before your first call

An opening script and questions to ask the lender

A live table of Texas banks ranked by portfolio % in this category

FAQ and links to related sub-types

The bank tables are not hand-curated. They are generated from Call Report data every time the site is rebuilt, so the rankings always reflect the latest filing.

Loan guide: Commercial & Industrial (C&I)

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/ci-business.html>

Operating lines, equipment, and term loans for businesses.

This category maps to specific lines on the bank's Call Report: RCON1766 — commercial and industrial loans

WHY THIS CATEGORY MATTERS

C&I lending funds business operations from cash flow. Reported as RCON1766. Core product for most Texas community banks — working capital, equipment, acquisitions.

SUB-GUIDES UNDER THIS CATEGORY (4 pages)

Each sub-guide is written for a specific deal situation — not just the parent category. For example, under Investor CRE you will find separate guides for office buildings, retail strips, industrial warehouses, mixed-use properties, and NNN single-tenant deals. The underwriting story, document checklist, and opening script differ for each.

- Working capital line of credit — Revolving credit for inventory, payroll, and seasonal cash needs.
- Equipment financing — Term loans or leases for machinery, vehicles, and business equipment.
- Business acquisition financing — Fund the purchase of a business or partner buyout.
- Asset-based lending (ABL) — Larger facilities secured by receivables, inventory, and sometimes equipment.

WHAT EVERY SUB-GUIDE INCLUDES

Who the loan is for (in plain English)

How community banks typically underwrite it

A checklist of documents to prepare before your first call

An opening script and questions to ask the lender

A live table of Texas banks ranked by portfolio % in this category

FAQ and links to related sub-types

Loan guide: Commercial & Industrial (C&I) (continued)

The bank tables are not hand-curated. They are generated from Call Report data every time the site is rebuilt, so the rankings always reflect the latest filing.

Loan guide: 1-4 Family Residential

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/residential-14.html>

Single-family and small residential rental portfolios on bank balance sheets.

This category maps to specific lines on the bank's Call Report: RCON1403 — loans secured by 1-4 family residential properties

WHY THIS CATEGORY MATTERS

1-4 family residential loans (RCON1403) differ from multifamily. Some Texas community banks are residential-heavy; others focus on commercial.

SUB-GUIDES UNDER THIS CATEGORY (3 pages)

Each sub-guide is written for a specific deal situation — not just the parent category. For example, under Investor CRE you will find separate guides for office buildings, retail strips, industrial warehouses, mixed-use properties, and NNN single-tenant deals. The underwriting story, document checklist, and opening script differ for each.

- Residential rental portfolio loan — Finance a basket of 1-4 unit rentals held for income.
- Investor fix-and-flip (1-4 unit) — Short-term financing for purchase and renovation of houses for resale.
- Residential second lien / HELOC (portfolio) — Second mortgage or HELOC held in bank portfolio (not sold to agencies).

WHAT EVERY SUB-GUIDE INCLUDES

Who the loan is for (in plain English)

How community banks typically underwrite it

A checklist of documents to prepare before your first call

An opening script and questions to ask the lender

A live table of Texas banks ranked by portfolio % in this category

FAQ and links to related sub-types

Loan guide: 1-4 Family Residential (continued)

The bank tables are not hand-curated. They are generated from Call Report data every time the site is rebuilt, so the rankings always reflect the latest filing.

Loan guide: Agricultural & Farmland

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/ag-farmland.html>

Farmland, ranch, and agricultural production credit.

This category maps to specific lines on the bank's Call Report: RCON1420, RCON1590 — farmland and agricultural production

WHY THIS CATEGORY MATTERS

Farmland (RCON1420) and ag production (RCON1590) lines are critical in rural Texas markets.

SUB-GUIDES UNDER THIS CATEGORY (3 pages)

Each sub-guide is written for a specific deal situation — not just the parent category. For example, under Investor CRE you will find separate guides for office buildings, retail strips, industrial warehouses, mixed-use properties, and NNN single-tenant deals. The underwriting story, document checklist, and opening script differ for each.

- Farmland purchase loan — Acquire cropland, pasture, or ranch land for agricultural use.
- Agricultural operating line — Seasonal credit for seed, fertilizer, livestock feed, and harvest expenses.
- Ranch & livestock financing — Credit for ranch operations, grazing land, and livestock.

WHAT EVERY SUB-GUIDE INCLUDES

Who the loan is for (in plain English)

How community banks typically underwrite it

A checklist of documents to prepare before your first call

An opening script and questions to ask the lender

A live table of Texas banks ranked by portfolio % in this category

FAQ and links to related sub-types

The bank tables are not hand-curated. They are generated from Call Report data every time the site is rebuilt, so the rankings always reflect the latest filing.

Texas Market — the big picture

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/market/texas-overview.html>

Before you dive into individual banks, it helps to understand the landscape. The Texas Market section answers: "What kind of lending market am I walking into?"

TEXAS OVERVIEW (351 banks, period 12/31/2025)

Median bank assets: \$437M

Median gross loans: \$256M

Median loans-to-assets: 62.0%

Banks in ICP band (500M–2B): 105

Portfolio-style commercial lenders: 129

Texas is genuinely a commercial-lending state. The typical bank puts about 62.0% of its assets into loans, and most of that is real estate and business lending — not credit cards or home mortgages.

PRODUCT AVAILABILITY PAGE

Shows how many of the 351 banks report a non-zero balance in each loan category. This tells you how many banks to put on your outreach list:

- Wide pool (C&I, investor CRE): plan for 10–15 conversations
- Narrow pool (multifamily deep specialists, construction): plan for 6–8 targeted calls

ASSET BANDS PAGE

Banks cluster by size. A \$3M deal is enormous for a \$150M bank and modest for a \$3B regional. The asset band guide helps you match deal size to bank size.

ICP BANK DIRECTORY (paginated)

All 105 banks in the 500M–2B range, ranked by loan portfolio, 20 per page. This is the single most useful list for mid-market commercial borrowers.

Insight I-01: Product choice breadth

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/insights/i-01-product-choice-breadth.html>

C&I / Business has the widest Texas lender pool (351 of 351 banks, 100% availability). Lease financing is the narrowest (118 banks, 34% availability).

WHY WE DOCUMENTED THIS

This insight comes from exploratory data analysis of all 351 Texas banks in the latest Call Report panel. We ran statistical tests — concentration indexes, percentile distributions, co-occurrence matrices — and translated the findings into something a borrower can act on.

WHAT TO DO

Prioritize high-availability categories for competitive terms; for niche products, target specialists only.

These insight pages are linked from scenario stories and the Borrower Playbook. They are also exported in `data/market_insights.json` for AI integrations.

Insight I-02: Market structure

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/insights/i-02-market-structure.html>

Most concentrated Texas lending markets: Lease financing (top 5 banks = 70%);
Unclassified (top 5 banks = 51%); Consumer (top 5 banks = 43%).

WHY WE DOCUMENTED THIS

This insight comes from exploratory data analysis of all 351 Texas banks in the latest Call Report panel. We ran statistical tests — concentration indexes, percentile distributions, co-occurrence matrices — and translated the findings into something a borrower can act on.

WHAT TO DO

In concentrated markets, still build an 8–10 bank list including mid-size community banks.

These insight pages are linked from scenario stories and the Borrower Playbook. They are also exported in `data/market_insights.json` for AI integrations.

Insight I-03: Deal size fit

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/insights/i-03-deal-size-fit.html>

Median Texas bank gross loans are 256M. A3M CRE loan is material for many community banks but small for regional portfolios.

WHY WE DOCUMENTED THIS

This insight comes from exploratory data analysis of all 351 Texas banks in the latest Call Report panel. We ran statistical tests — concentration indexes, percentile distributions, co-occurrence matrices — and translated the findings into something a borrower can act on.

WHAT TO DO

Disclose loan size early; ask if it clears internal hold limits.

These insight pages are linked from scenario stories and the Borrower Playbook. They are also exported in `data/market_insights.json` for AI integrations.

Insight I-04: Specialist targeting

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/insights/i-04-specialist-targeting.html>

Texas has 253 investor CRE specialists, 23 multifamily specialists, and 245 C&I specialists at the $\geq 8\%$ threshold.

WHY WE DOCUMENTED THIS

This insight comes from exploratory data analysis of all 351 Texas banks in the latest Call Report panel. We ran statistical tests — concentration indexes, percentile distributions, co-occurrence matrices — and translated the findings into something a borrower can act on.

WHAT TO DO

Lead with NOI, occupancy, and sponsor track record for CRE outreach.

These insight pages are linked from scenario stories and the Borrower Playbook. They are also exported in `data/market_insights.json` for AI integrations.

Insight I-05: Bank size fit

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/insights/i-05-bank-size-fit.html>

129 Texas banks are portfolio-style commercial lenders (CRE + C&I > 50% of loans). 43 are consumer-heavy — usually a poor fit for commercial borrowers.

WHY WE DOCUMENTED THIS

This insight comes from exploratory data analysis of all 351 Texas banks in the latest Call Report panel. We ran statistical tests — concentration indexes, percentile distributions, co-occurrence matrices — and translated the findings into something a borrower can act on.

WHAT TO DO

Prefer community portfolio-style banks for relationship-driven CRE/C&I deals.

These insight pages are linked from scenario stories and the Borrower Playbook. They are also exported in `data/market_insights.json` for AI integrations.

Insight I-06: ICP opportunity

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/insights/i-06-icp-opportunity.html>

105 Texas banks sit in the 500M–2B asset band — large enough for 2M–25M relationship credits, small enough to value sponsors.

WHY WE DOCUMENTED THIS

This insight comes from exploratory data analysis of all 351 Texas banks in the latest Call Report panel. We ran statistical tests — concentration indexes, percentile distributions, co-occurrence matrices — and translated the findings into something a borrower can act on.

WHAT TO DO

Shortlist 3–5 ICP banks in your city with $\geq 8\%$ in your product category.

These insight pages are linked from scenario stories and the Borrower Playbook. They are also exported in `data/market_insights.json` for AI integrations.

Insight I-07: Geography

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/insights/i-07-geography.html>

Dallas leads Texas bank HQ count with 18 institutions. HQ city is a starting point — branch footprint determines local presence.

WHY WE DOCUMENTED THIS

This insight comes from exploratory data analysis of all 351 Texas banks in the latest Call Report panel. We ran statistical tests — concentration indexes, percentile distributions, co-occurrence matrices — and translated the findings into something a borrower can act on.

WHAT TO DO

Verify branch coverage in your market; do not limit outreach to HQ city only.

These insight pages are linked from scenario stories and the Borrower Playbook. They are also exported in `data/market_insights.json` for AI integrations.

Insight I-08: Market momentum

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/insights/i-08-market-momentum.html>

Texas bank loan books grew over the last five reporting quarters — ask lenders if their book in your sector grew too.

WHY WE DOCUMENTED THIS

This insight comes from exploratory data analysis of all 351 Texas banks in the latest Call Report panel. We ran statistical tests — concentration indexes, percentile distributions, co-occurrence matrices — and translated the findings into something a borrower can act on.

WHAT TO DO

Ask lenders about recent portfolio growth in your product category.

These insight pages are linked from scenario stories and the Borrower Playbook. They are also exported in `data/market_insights.json` for AI integrations.

Insight I-09: Lender diligence

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/insights/i-09-lender-diligence.html>

Most Texas banks show very low 90+ day past-due ratios; a small tail warrants extra questions, not automatic exclusion.

WHY WE DOCUMENTED THIS

This insight comes from exploratory data analysis of all 351 Texas banks in the latest Call Report panel. We ran statistical tests — concentration indexes, percentile distributions, co-occurrence matrices — and translated the findings into something a borrower can act on.

WHAT TO DO

Ask about charge-offs and appetite in your product category before exclusivity.

These insight pages are linked from scenario stories and the Borrower Playbook. They are also exported in `data/market_insights.json` for AI integrations.

Insight I-10: Bank archetypes

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/insights/i-10-bank-archetypes.html>

129 banks are portfolio-style commercial lenders; 43 are consumer-heavy (residential + consumer > 40%).

WHY WE DOCUMENTED THIS

This insight comes from exploratory data analysis of all 351 Texas banks in the latest Call Report panel. We ran statistical tests — concentration indexes, percentile distributions, co-occurrence matrices — and translated the findings into something a borrower can act on.

WHAT TO DO

Filter out consumer-heavy banks before outreach; check mix bars on each profile.

These insight pages are linked from scenario stories and the Borrower Playbook. They are also exported in `data/market_insights.json` for AI integrations.

Insight I-11: Cross-sell

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/insights/i-11-cross-sell.html>

180 Texas banks are specialists in both investor CRE and C&I ($\geq 8\%$ each) — candidates for bundled relationships.

WHY WE DOCUMENTED THIS

This insight comes from exploratory data analysis of all 351 Texas banks in the latest Call Report panel. We ran statistical tests — concentration indexes, percentile distributions, co-occurrence matrices — and translated the findings into something a borrower can act on.

WHAT TO DO

For CRE + operating line needs, prioritize dual-specialist banks.

These insight pages are linked from scenario stories and the Borrower Playbook. They are also exported in `data/market_insights.json` for AI integrations.

Insight I-12: Outreach planning

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/insights/i-12-outreach-planning.html>

Build a 10–15 bank shortlist for C&I and investor CRE. Multifamily has only ~2 deep specialists ($\geq 15\%$) statewide.

WHY WE DOCUMENTED THIS

This insight comes from exploratory data analysis of all 351 Texas banks in the latest Call Report panel. We ran statistical tests — concentration indexes, percentile distributions, co-occurrence matrices — and translated the findings into something a borrower can act on.

WHAT TO DO

Match outreach list size to product availability; track responses in a simple CRM.

These insight pages are linked from scenario stories and the Borrower Playbook. They are also exported in `data/market_insights.json` for AI integrations.

Borrower story: Dallas sponsor bridges a 48-unit value-add apartment

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/scenarios/dallas-multifamily-bridge.html>

THE DEAL

A Dallas-based sponsor buys a 48-unit 1980s garden-style community in Oak Cliff with 78% occupancy and a clear rent-gap to renovated comps. They need a 24-month bridge before permanent agency or bank takeout.

Persona: Experienced multifamily operator

Location: Dallas, Texas

Size: \$4.2M bridge

THE SITUATION

Texas has only about 19 banks with deep multifamily concentration (15%+ of loans). For a \$4M+ bridge, you cannot spray-and-pray — you need banks that already hold apartment paper and understand value-add timelines. Dallas has the highest HQ density in the state, but HQ city is only a starting point; branch footprint and portfolio mix matter more.

WHAT THE DATA TELLS YOU

- Multifamily is a narrow lender pool vs C&I or investor CRE — target specialists
- Median Texas bank gross loans ~251M; a4M bridge is material to ICP community banks
- 105 Texas banks sit in the 500M–2B ICP band — ideal for mid-market apartment deals

YOUR ACTION PLAN

1. Build a shortlist of 8–10 Dallas-area and statewide multifamily specialists (8%+ portfolio share)
2. Lead with rent roll, renovation budget, and stabilized NOI pro forma — not just purchase price
3. Ask each bank their max hold on multifamily bridge and whether they offer mini-perm takeout
4. Compare 3 term sheets; multifamily specialists often price better than generalist banks

Borrower story: Dallas sponsor bridges a 48-unit value-add apartment (continued)

QUESTIONS FOR YOUR FIRST BANK CALL

- What is your maximum multifamily bridge exposure per sponsor?
- Do you require pre-leasing or renovation completion milestones?
- Can you provide takeout on the same relationship after stabilization?

These stories are educational examples, not financial advice. They show how a prepared borrower uses Call Report data to build a shortlist, prepare documents, and ask smart questions — before anyone asks for your social security number.

Borrower story: Houston logistics owner refinances a 120,000 SF warehouse

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/scenarios/houston-industrial-refinance.html>

THE DEAL

A Houston investor owns a single-tenant logistics warehouse on the North Belt with 7 years remaining on a NNN lease. They want to pull equity for their next acquisition and extend the loan term.

Persona: Industrial property investor

Location: Houston, Texas

Size: \$8.5M refinance

THE SITUATION

Investor CRE (income property) has one of the widest lender pools in Texas — most banks report non-zero balances. Houston is the second-largest banking HQ market. For an \$8.5M refi, both ICP community banks (500M-2B) and larger regionals can participate; the question is who already likes industrial exposure.

WHAT THE DATA TELLS YOU

- Investor CRE has high availability — competitive process with 10-15 banks is realistic
- Median active-lender investor CRE exposure ~116M statewide—an 8.5M deal is meaningful
- Consumer lending is the most concentrated product; CRE is fragmented — shop broadly

YOUR ACTION PLAN

1. Prepare trailing-12 NOI, lease abstract, and tenant credit summary
2. Shortlist Houston HQ banks plus statewide industrial-leaning specialists from portfolio mix
3. Disclose desired cash-out amount early — some community banks cap proceeds
4. Run parallel conversations with 3 ICP banks and 2 regionals for pricing leverage

QUESTIONS FOR YOUR FIRST BANK CALL

- What DSCR and LTV do you require on single-tenant industrial?
- Do you offer interest-only periods on refinance?
- What is your maximum hold per property type?

Borrower story: Houston logistics owner refinances a 120,000 SF warehouse (continued)

These stories are educational examples, not financial advice. They show how a prepared borrower uses Call Report data to build a shortlist, prepare documents, and ask smart questions — before anyone asks for your social security number.

Borrower story: Austin SaaS company secures a \$2M revolving line for growth

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/scenarios/austin-working-capital-line.html>

THE DEAL

An Austin-based B2B software company with \$12M revenue needs a working capital line to fund payroll between enterprise contract payments. They have receivables, minimal hard collateral, and a 3-year growth plan.

Persona: Growing technology business

Location: Austin, Texas

Size: \$2M revolver

THE SITUATION

C&I is among the most fragmented Texas lending markets — nearly every commercial bank reports some business lending. The challenge is finding a bank whose C&I book is large enough to care about a \$2M line but small enough to offer relationship pricing. Austin has growing bank HQ presence; many banks lend statewide from Dallas or San Antonio HQs.

WHAT THE DATA TELLS YOU

- C&I median at active lenders ~27M—a2M line is relevant to community banks
- Portfolio-style community banks (CRE+C&I >50%) are best fit for relationship C&I
- CRE specialists often overlap C&I — one bank may do both property and operating line

YOUR ACTION PLAN

1. Target ICP banks with C&I share $\geq 8\%$ and low consumer concentration
2. Prepare 2 years financials, AR aging, customer concentration, and use-of-funds narrative
3. Ask about borrowing base vs cash-flow underwriting — structure matters for SaaS
4. Include 2 Austin-area banks and 3 statewide C&I specialists in your first wave

QUESTIONS FOR YOUR FIRST BANK CALL

- Do you underwrite on recurring revenue or traditional borrowing base?
- What covenant package do you use for asset-light businesses?
- Can this line grow with us without a full re-underwrite?

Borrower story: Austin SaaS company secures a \$2M revolving line for growth (continued)

These stories are educational examples, not financial advice. They show how a prepared borrower uses Call Report data to build a shortlist, prepare documents, and ask smart questions — before anyone asks for your social security number.

Borrower story: Waco manufacturer buys its headquarters building

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/scenarios/waco-owner-occupied-purchase.html>

THE DEAL

A precision machining company renting in Waco finds its 45,000 SF building for sale. They want to own the facility, consolidate operations, and stop paying rent to a landlord who may sell to a competitor.

Persona: Owner-operator manufacturer

Location: Waco, Texas

Size: \$3.1M purchase + improvements

THE SITUATION

Waco has several strong ICP banks including some of the largest loan portfolios in the 500M–2B band statewide. Owner-occupied CRE is reported on RCONF160 — a distinct line from investor CRE. Community banks in Central Texas often prefer user-occupied deals because cash flow ties directly to the operating business.

WHAT THE DATA TELLS YOU

- FIRST NATIONAL BANK OF CENTRAL TEXAS (Waco) ranks among top ICP loan books statewide
- Owner-occupied CRE is a separate Call Report bucket from investor income property
- Community banks (FFIEC 041) median portfolio ~250M—3M deals are committee material

YOUR ACTION PLAN

1. Start with Waco HQ banks and Central Texas branches of statewide community banks
2. Combine business financials with property NOI — underwriters blend operating company and real estate
3. Get environmental and property condition reports before term sheet — speeds community bank credit
4. Ask about SBA 504 pairing if equity injection is tight

QUESTIONS FOR YOUR FIRST BANK CALL

- What LTV do you offer on owner-occupied manufacturing?
- Do you require the business to occupy 51%+ of the building?
- Can equipment financing be bundled in the same relationship?

Borrower story: Waco manufacturer buys its headquarters building (continued)

These stories are educational examples, not financial advice. They show how a prepared borrower uses Call Report data to build a shortlist, prepare documents, and ask smart questions — before anyone asks for your social security number.

Borrower story: Panhandle operator finances 1,200 acres of irrigated farmland

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/scenarios/amarillo-farmland-expansion.html>

THE DEAL

A fourth-generation Panhandle operator acquires neighboring irrigated acreage to scale production. They need a farmland term loan plus a seasonal operating line for inputs.

Persona: Row-crop and cattle operator

Location: Amarillo, Texas

Size: 6.8Mland + 400K operating line

THE SITUATION

Agricultural lending is a niche pool — fewer Texas banks report meaningful farmland or ag production balances than CRE or C&I. Amarillo and West Texas have banks with deep ag heritage; portfolio mix shows farm vs production split on RCON1420 and RCON1590.

WHAT THE DATA TELLS YOU

- Farmland and ag production are among the narrowest lender pools in Texas
- Specialist threshold (8% portfolio share) identifies true ag banks vs incidental exposure
- FIRSTBANK SOUTHWEST (Amarillo) is among the largest ICP loan portfolios statewide

YOUR ACTION PLAN

1. Identify banks with farm + ag production >15% combined portfolio share
2. Prepare 5-year production history, water rights documentation, and crop insurance
3. Bundle operating line request — ag banks often prefer full-relationship structures
4. Expect fewer term-sheet options than CRE — relationship depth matters

QUESTIONS FOR YOUR FIRST BANK CALL

- What advance rate do you use on irrigated vs dryland collateral?
- Do you offer combined land term and annual operating renewal?
- How do you stress commodity prices in underwriting?

Borrower story: Panhandle operator finances 1,200 acres of irrigated farmland (continued)

These stories are educational examples, not financial advice. They show how a prepared borrower uses Call Report data to build a shortlist, prepare documents, and ask smart questions — before anyone asks for your social security number.

Borrower story: San Antonio entrepreneur buys a multi-unit restaurant group

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/scenarios/san-antonio-restaurant-acquisition.html>

THE DEAL

An experienced restaurant operator acquires three casual-dining locations from a retiring owner. They need acquisition financing plus working capital for a rebrand and staffing ramp.

Persona: Food & beverage entrepreneur

Location: San Antonio, Texas

Size: 1.8M *acquisition* + 300K working capital

THE SITUATION

Business acquisition loans sit in C&I buckets. San Antonio has major regional banks (Frost, Broadway National) plus many community banks. For sub-\$2M deals, ICP community banks often move faster than regionals if the sponsor has relevant operating history.

WHAT THE DATA TELLS YOU

- Median ICP bank loans ~700M *gross*—a 1.8M acquisition is relationship-sized
- Disclose deal size early — below-median exposures may not clear committee thresholds at some banks
- Ask lenders if their restaurant/Hospitality book grew in the last 5 quarters

YOUR ACTION PLAN

1. Prepare quality-of-earnings summary, store-level P&Ls, and transition plan
2. Target C&I specialists with low consumer concentration — avoid credit-card-heavy banks
3. Pitch relationship value: deposits, merchant services, future real estate needs
4. Contact 8–10 banks; acquisition finance is competitive in Texas C&I market

QUESTIONS FOR YOUR FIRST BANK CALL

- Have you financed restaurant acquisitions in the last 24 months?
- What seller note or equity injection do you require?
- Is working capital included in one facility or a separate line?

Borrower story: San Antonio entrepreneur buys a multi-unit restaurant group (continued)

These stories are educational examples, not financial advice. They show how a prepared borrower uses Call Report data to build a shortlist, prepare documents, and ask smart questions — before anyone asks for your social security number.

Borrower story: El Paso investor refinances a neighborhood retail strip

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/scenarios/el-paso-retail-strip-refinance.html>

THE DEAL

A local investor owns a 12-unit neighborhood strip center with mixed local tenants and one anchor grocer. Occupancy is 92%; they want to refinance out of a maturing loan and fund facade improvements.

Persona: Retail CRE investor

Location: El Paso, Texas

Size: \$2.4M refinance

THE SITUATION

Retail CRE competes in the broad investor CRE pool. El Paso has fewer HQ banks than Dallas or Houston, but many Texas community banks lend statewide from branch networks. Use branch city data, not just HQ city, when building your list.

WHAT THE DATA TELLS YOU

- HQ city $\neq$ lending territory — FDIC branch data shows where banks actually operate
- Investor CRE market is fragmented — build an 8-10 bank competitive process
- Median CRE proxy at Texas banks ~116M—2.4M is material for community lenders

YOUR ACTION PLAN

1. Include El Paso branch banks plus statewide retail-leaning specialists
2. Prepare tenant roster, lease expirations, and CAM reconciliation
3. Highlight grocer anchor credit and local foot-traffic story
4. Compare community bank vs regional pricing — both may participate at this size

QUESTIONS FOR YOUR FIRST BANK CALL

- What tenant concentration limits do you apply on retail strips?
- Will you finance TI reserves in the refinance?
- Do you lend in El Paso from a non-local HQ?

Borrower story: El Paso investor refinances a neighborhood retail strip (continued)

These stories are educational examples, not financial advice. They show how a prepared borrower uses Call Report data to build a shortlist, prepare documents, and ask smart questions — before anyone asks for your social security number.

Borrower story: Midland developer builds a spec industrial pad in Permian Basin

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/scenarios/midland-ground-up-industrial.html>

THE DEAL

A Midland developer breaks ground on a 60,000 SF spec industrial building with pre-leasing interest from oilfield services tenants. They need a construction loan with mini-perm option.

Persona: Commercial developer

Location: Midland, Texas

Size: \$5.5M construction loan

THE SITUATION

Construction lending is reported on RCONF158/RCONF159 — a smaller specialist pool than stabilized CRE. Permian Basin cycles matter: banks active in construction here often have experience with energy-correlated tenant demand. Check 5-quarter trend — growing construction books signal appetite.

WHAT THE DATA TELLS YOU

- Construction is a narrower pool — expect 6-8 targeted calls, not 15-bank spray
- Review lender 90+ day past-due ratios — elevated stress warrants extra diligence questions
- Market momentum: ask if their construction book grew over the last 5 quarters

YOUR ACTION PLAN

1. Target banks with construction $\geq 8\%$ and Midland/Odessa branch presence
2. Prepare full construction budget, GC contract, and pre-leasing LOIs
3. Stress tenant demand under lower oil price scenario in your narrative
4. Negotiate extension options and takeout criteria upfront

QUESTIONS FOR YOUR FIRST BANK CALL

- What pre-leasing percentage do you require before funding?
- Do you offer construction-to-mini-perm in one approval?
- How do you handle cost overruns and draw inspections?

Borrower story: Midland developer builds a spec industrial pad in Permian Basin (continued)

These stories are educational examples, not financial advice. They show how a prepared borrower uses Call Report data to build a shortlist, prepare documents, and ask smart questions — before anyone asks for your social security number.

Borrower story: Tyler physician group buys its clinic building

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/scenarios/tyler-medical-office-owner-occupied.html>

THE DEAL

A 6-physician orthopedic group wants to purchase their 28,000 SF clinic from a REIT landlord. Stable patient volume and strong practice financials support the acquisition.

Persona: Medical practice partners

Location: Tyler, Texas

Size: \$4.6M acquisition

THE SITUATION

Medical office can be owner-occupied or investor CRE depending on structure. For a user-occupant practice, owner-occupied CRE underwriting ties to practice cash flow. Tyler has community banks (Southside Bank HQ nearby) and East Texas lenders with healthcare exposure.

WHAT THE DATA TELLS YOU

- Filter out consumer-heavy banks — prioritize portfolio-style commercial lenders
- Community banks prefer user-occupied deals with strong operating entity financials
- Median Texas bank assets ~\$433M — physician groups are prized deposit relationships

YOUR ACTION PLAN

1. Present practice financials, physician comp structure, and payer mix
2. Target East Texas community banks with owner-occupied CRE share $\geq 8\%$
3. Discuss deposit balances and treasury services — strengthens community bank proposals
4. Get appraisal and Phase I early — medical sites may trigger environmental review

QUESTIONS FOR YOUR FIRST BANK CALL

- Do you have healthcare practice lending experience?
- What DSCR do you require on medical owner-occupied?
- Can tenant improvements for imaging equipment be financed?

Borrower story: Tyler physician group buys its clinic building (continued)

These stories are educational examples, not financial advice. They show how a prepared borrower uses Call Report data to build a shortlist, prepare documents, and ask smart questions — before anyone asks for your social security number.

Borrower story: Dallas sponsor bundles warehouse debt and operating line

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/scenarios/dallas-cre-ci-bundle.html>

THE DEAL

A Dallas sponsor owns two light-industrial properties and an operating company that distributes building materials. They want to refinance both properties and upsize their working capital line in one banking relationship.

Persona: Diversified commercial sponsor

Location: Dallas, Texas

Size: 6MCRE + 1.5M line

THE SITUATION

EDA co-occurrence analysis shows investor CRE specialists frequently overlap with C&I specialists. Banks with both $\geq 8\%$ investor CRE and $\geq 8\%$ C&I are ideal for bundled requests.

One relationship can reduce legal cost and covenant complexity vs splitting across banks.

WHAT THE DATA TELLS YOU

- CRE + C&I cross-sell: many full-relationship banks bundle property and operating credit
- Dallas has the deepest specialist bench — verify branch coverage, not just HQ
- 105 ICP banks statewide — relationship bundling works best in 500M–2B segment

YOUR ACTION PLAN

1. Filter banks where both investor CRE and C&I exceed 8% portfolio share
2. Prepare consolidated sponsor financials plus property-level rent rolls
3. Pitch total relationship: deposits, treasury, future acquisitions
4. Negotiate cross-collateralization terms carefully — ask what's required vs optional

QUESTIONS FOR YOUR FIRST BANK CALL

- Can CRE and C&I be under one credit agreement or separate facilities?
- Do you offer relationship pricing for combined exposure?
- What reporting package do you require for consolidated sponsors?

Borrower story: Dallas sponsor bundles warehouse debt and operating line (continued)

These stories are educational examples, not financial advice. They show how a prepared borrower uses Call Report data to build a shortlist, prepare documents, and ask smart questions — before anyone asks for your social security number.

Borrower story: Corpus Christi hotel owner refinances a 95-room beachfront property

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/scenarios/corpus-christi-hotel-refinance.html>

THE DEAL

An investor owns a 95-room hotel with ground-floor retail on Corpus Christi Bay. Tourism recovery has stabilized RevPAR; they seek a 10-year fixed refinance with moderate cash-out.

Persona: Hospitality investor

Location: Corpus Christi, Texas

Size: \$11M refinance

THE SITUATION

Hotels sit in investor CRE / income property buckets. At \$11M, both larger ICP banks and regionals may participate. Compare your deal size to median and P75 product exposure —

at this size you are above median for many community banks, which can be good for engagement but may require regional participation.

WHAT THE DATA TELLS YOU

- Deal size vs median exposure: \$11M is large for many community banks — include regionals
- Perform lender diligence: ask about hospitality exposure and 90+ day past-due trends
- Hospitality is specialized — prioritize banks that already hold hotel or mixed-use CRE

YOUR ACTION PLAN

1. Prepare 3-year STR report, franchise agreement summary, and capital expenditure plan
2. Mix community bank outreach with 2-3 regional players for capacity
3. Ask specifically about hospitality concentration limits
4. Disclose seasonality and hurricane insurance costs in first call

QUESTIONS FOR YOUR FIRST BANK CALL

- What is your maximum single-asset hospitality exposure?
- Do you require franchise approval for refinance?
- How do you underwrite insurance and wind coverage in coastal markets?

Borrower story: Corpus Christi hotel owner refinances a 95-room beachfront property (continued)

These stories are educational examples, not financial advice. They show how a prepared borrower uses Call Report data to build a shortlist, prepare documents, and ask smart questions — before anyone asks for your social security number.

Borrower story: Lubbock contractor finances \$1.2M equipment fleet

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/scenarios/lubbock-equipment-fleet-finance.html>

THE DEAL

A West Texas commercial contractor wins larger municipal contracts and needs to finance excavators, trucks, and trailers plus a line for payroll between draws.

Persona: Commercial contractor

Location: Lubbock, Texas

Size: 1.2Mterm + 500K line

THE SITUATION

Equipment finance appears in C&I and lease financing lines. West Texas community banks often understand contractor cycles. For equipment + working capital, C&I specialists with low consumer mix are the right target — not mortgage-heavy banks.

WHAT THE DATA TELLS YOU

- C&I has the widest lender availability — competitive terms possible with 8–10 banks
- Portfolio-style community banks (not consumer-heavy) fit contractor relationships
- Lease financing (RCON1754) is a separate narrow pool — most deals sit in C&I term debt

YOUR ACTION PLAN

1. Prepare equipment quotes, contract backlog, and bonding capacity letter
2. Target Lubbock and West Texas C&I banks with contractor experience
3. Ask about UCC filings vs titled equipment loans — structure affects rate
4. Bundle operating line in same credit request for efficiency

QUESTIONS FOR YOUR FIRST BANK CALL

- Do you finance new and used heavy equipment equally?
- What advance rates apply to fleet collateral?
- Can the line resize with contract awards?

These stories are educational examples, not financial advice. They show how a prepared borrower uses Call Report data to build a shortlist, prepare documents, and ask smart questions — before anyone asks for your social security number.

Bank profile pages — reading one like a borrower

URL pattern: `http://lenni-borrower.s3-website.us-east-2.amazonaws.com/banks/{bank-id}-{bank-name}.html`

Count: 351 profiles

Example: `http://lenni-borrower.s3-website.us-east-2.amazonaws.com/banks/682563-frost-bank.html` (Frost Bank, San Antonio — one of the largest Texas portfolios)

Every bank with complete Call Report data gets its own page. Here is how to read one in two minutes.

STEP 1: GLANCE AT THE BADGES

"ICP (500M-2B)" means the bank is in Lenni's core community-bank segment — large enough for meaningful commercial deals, small enough to value relationships.

"FDIC community bank" means the FDIC classifies it as a community institution.

STEP 2: LOOK AT THE PORTFOLIO MIX CHART

This is the reason the site exists. Eleven categories show where the bank actually lends. A bar at 25% for Investor CRE means one quarter of their loan book is income-producing property. A bar at 3% for Multifamily means apartments are a side line, not a focus.

STEP 3: CHECK "GOOD FIT IF YOU NEED..."

Auto-generated bullets based on specialties at 15%+ concentration.

STEP 4: SCROLL TO BRANCHES

351 banks, thousands of branches statewide. HQ city is not the whole story.

STEP 5: USE ENRICHMENT (when available)

255 banks have phone numbers and commercial banking links scraped from their websites.

Call the commercial lending line, not the retail 1-800 number.

STEP 6: CLICK THROUGH TO THEIR WEBSITE

The site is a research tool. The relationship starts at the bank.

City pages — finding banks near you

URL pattern: /cities/{city-name}.html — 40 cities covered

We built city pages for the 40 Texas cities with the most bank headquarters — Dallas, Houston, Austin, San Antonio, Fort Worth, El Paso, Waco, Tyler, Amarillo, and others.

Each page shows:

- How many banks are headquartered in the city

- How many banks have at least one branch there

- How many fall in the ICP (500M–2B) range

- A ranked table of the top 25 HQ banks by loan portfolio size

A practical tip: if your city only has two small HQ banks, expand your search. Many Texas community banks lend statewide from a single HQ. Check branch lists on bank profiles, and browse the ICP directory for banks that operate in your county even if they are based elsewhere.

Guides — the reference shelf

URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/guides/>

BORROWER PLAYBOOK

Nine steps from "I need a loan" to "I have three term sheets." Start here if you are new to commercial bank shopping.

OUTREACH CHECKLIST

Twelve checkboxes — printable — covering product definition, shortlist building, document prep, and parallel conversations.

GLOSSARY

Plain-English definitions for Call Report terms. If you see "RCON1460" on a bank page and wonder what it means, the glossary explains it. Sourced from the Federal Reserve MDRM dictionary.

FAQ

Eight common questions: data sources, what a Call Report is, whether rates are shown, whether you can apply on the site.

METHODOLOGY

Technical documentation for researchers: join logic between FFIEC and FDIC, specialist threshold definition, known limitations.

Match my deal — overview

The green "Match my deal" bar on the home page is the fastest way to go from "I have a deal" to "here are the banks that already lend like this."

In one sentence: you paste or describe your deal, and Lenni figures out the loan type, ranks 351 real Texas banks from public FFIEC Call Report data, and opens a workspace with a preparation roadmap.

THE SIMPLE FLOW

Your text

- Listing profile (what you are buying, where, and why)
- Loan product matches (from our 27 sub-type guides)
- Recommended banks (ranked by portfolio concentration)
- Four-step prep roadmap (documents to gather + first-call script)

This is research and preparation — not a loan application, not a rate quote, and not an approval decision. Every bank name comes from real regulatory filings. Lenni never invents a bank.

This feature was built June 22, 2026. The sections that follow explain exactly what to type, what comes back, and what the system cannot do yet.

Match my deal — what you can paste or type

You can use the search bar three ways:

1. PASTE LISTING TEXT (recommended)

Copy the property description from Zillow, LoopNet, Crexi, or any listing page. Paste it into the bar. Include price, city, property type, and size (units, square feet, or acres) if the listing shows them.

2. PASTE A LISTING URL (with an important caveat)

The search box shows Zillow, LoopNet, and Crexi as examples. Today, the system reads the TEXT you provide — it does not automatically fetch or scrape listing pages from those sites yet. If you paste only a URL, also paste the listing description below it, or write your own short summary.

3. DESCRIBE YOUR DEAL IN PLAIN ENGLISH

No listing required. A single sentence works if it includes:

- What it is (apartment, warehouse, land, restaurant, etc.)
- Where (any Texas city or metro)
- Size (40-unit, 120,000 SF, 12 acres)
- Price (4M, 849k)
- What you want to do (buy, refinance, bridge, build, hold land, owner-occupy, working capital)

WORDS THAT HELP THE MATCHER

Property type — apartment, warehouse, retail strip, office, hotel, land, farm, restaurant, manufacturing

Size — "40-unit", "120,000 SF", "12.4 acres"

Price — "\$4M", "\$849k", "asking \$2.4 million"

Intent — bridge, refinance, acquisition, ground-up construction, hold land, owner-occupied, working capital line

Location — Dallas, Houston, Austin, Brenham, Midland, El Paso, and any other Texas city

Match my deal — example searches

Below are real examples you can copy into "Match my deal" to see how the system responds. Each row shows what you might type and what Lenni typically matches it to.

MULTIFAMILY (APARTMENTS, 5+ UNITS)

Type: "40-unit apartment value-add bridge loan in Fort Worth \$4.2M"

Matches: Multifamily → bridge or value-add/rehab

Type: "48-unit garden-style apartment in Dallas, \$4.2M bridge"

Matches: Multifamily → bridge

INVESTOR CRE (RENTAL INCOME PROPERTY)

Type: "120,000 SF warehouse refinance in Houston, \$8.5M"

Matches: Investor CRE → industrial

Type: "12-unit retail strip refinance in El Paso, \$2.4M"

Matches: Investor CRE → retail

Type: "95-room beachfront hotel refinance in Corpus Christi, \$11M"

Matches: Investor CRE → mixed-use

OWNER-OCCUPIED CRE (YOU OPERATE OUT OF THE BUILDING)

Type: "Manufacturer buying 45,000 SF headquarters in Waco, \$3.1M"

Matches: Owner-occupied CRE → purchase

Type: "6-physician orthopedic group buying 28,000 SF clinic in Tyler, \$4.6M"

Matches: Owner-occupied CRE → purchase

LAND & CONSTRUCTION

Type: "12.4 acre land lot near Brenham TX asking \$849,000 — holding for investment"

Matches: Commercial construction → lot loans or land development

Type: "Ground-up spec industrial in Midland, \$5.5M construction loan"

Matches: Commercial construction → ground-up

C&I / BUSINESS LENDING

Type: "Working capital line of credit for manufacturing business in Houston"

Matches: C&I / Business → working capital line

Type: "\$2M revolving line for Austin SaaS company"

Matches: C&I / Business → working capital line

Type: "Restaurant acquisition in San Antonio, \$1.8M"

Matches: C&I / Business → acquisition finance

Match my deal — example searches (continued)

Type: "West Texas contractor financing \$1.2M equipment fleet"

Matches: C&I / Business → equipment

AGRICULTURE

Type: "1,200 acres irrigated farmland near Amarillo, \$6.8M"

Matches: Ag & farmland → farmland purchase

Each example above corresponds to one of the 12 borrower scenario stories on the site (/scenarios/). Those pages add a fuller narrative, an action plan, and specific questions to ask lenders.

Match my deal — what gets matched to your deal

When you click "Match my deal →", the system returns four things. Here is what each one means in plain English.

1. LISTING PROFILE

A structured summary of what Lenni understood from your text:

- Property type (Multifamily, Investor CRE, C&I, Land, etc.)
- City and Texas metro area
- Price, unit count, or acreage (when mentioned)
- Intent — acquire, bridge, refinance, build, hold land, or owner-occupy
- A short title like "40-unit · Dallas, TX · \$4,000,000"

2. LOAN PRODUCT MATCHES

One to three loan sub-types from our guide library (defined in `content/loan_products.yaml`). Each match includes:

- The sub-type name (e.g. "Apartment bridge loan")
- A confidence score based on keyword and intent rules
- A link to the full sub-type guide page
- "How to approach" — an opening script and questions to ask the lender

3. RECOMMENDED BANKS

Up to ten Texas banks ranked by how much of their loan portfolio sits in the matched category. For each bank you see:

- Bank name and RSSD ID (stable federal identifier)
- Portfolio percentage in that category (from FFIEC Call Reports)
- A one-line explanation ("12% of loan book in multifamily — active in this category per FFIEC filings")
- A link to the bank's full profile page

All 351 banks come from `banks.json` — real institutions, never invented names.

4. PREPARATION ROADMAP

A four-step checklist built from the matched sub-type guide:

- Step 1 — Understand your deal type
- Step 2 — Gather documents (rent roll, financials, purchase contract, etc.)
- Step 3 — Shortlist banks from the recommendations
- Step 4 — First-call script and questions

Match my deal — what gets matched to your deal (continued)

The workspace then opens with three tabs: Land info (for land/development deals), Loan info (products + banks), and My info (borrower details — placeholder for future features).

Match my deal — loan categories the matcher knows

The matcher maps your deal to one of seven parent loan categories and then to a specific sub-type within that category. There are 27 sub-types in total — the same guides you can browse under Loan Types on the site.

Multifamily (5+ units) (5 sub-types)

Apartment acquisition loan, Multifamily refinance, Apartment bridge loan, Multifamily value-add / rehab, Multifamily permanent takeout

Investor CRE (income property) (5 sub-types)

Investor office building loan, Investor retail / strip center loan, Investor industrial / warehouse loan, Mixed-use income property loan, NNN / single-tenant net lease loan

Owner-Occupied CRE (3 sub-types)

Owner-occupied property purchase, Owner-occupied refinance, Owner-occupied + SBA 504

Commercial Construction (4 sub-types)

Ground-up commercial construction, Major commercial renovation, Land development & lot loans, Residential / commercial lot loans

Commercial & Industrial (C&I) (4 sub-types)

Working capital line of credit, Equipment financing, Business acquisition financing, Asset-based lending (ABL)

1–4 Family Residential (3 sub-types)

Residential rental portfolio loan, Investor fix-and-flip (1–4 unit), Residential second lien / HELOC (portfolio)

Agricultural & Farmland (3 sub-types)

Farmland purchase loan, Agricultural operating line, Ranch & livestock financing

HOW MATCHING WORKS (WITHOUT JARGON)

Match my deal — loan categories the matcher knows (continued)

Lenni scans your text for property-type words (apartment, warehouse, land, etc.) and intent words (bridge, refinance, build, hold). It scores each sub-type's keywords from the YAML guide library and picks the best fits. It then looks up which Texas banks report the highest portfolio share in that category on their Call Report.

Example: "40-unit bridge in Dallas" hits multifamily keywords + bridge intent → Apartment bridge loan → banks ranked by multifamily % (RCON1460 on the Call Report).

Match my deal — what it does NOT do

Being clear about limits helps you use the tool correctly.

DOES NOT SCRAPE LISTING SITES (YET)

Pasting a Zillow or LoopNet URL alone will not pull the listing automatically. Paste the description text or write your own summary.

DOES NOT QUOTE RATES OR TERMS

FFIEC data shows portfolio composition, not pricing. Every bank sets its own rates and credit policy.

DOES NOT PREDICT APPROVAL

A high portfolio share means the bank actively lends in that category — not that your specific deal will be approved.

DOES NOT LET YOU APPLY ON THE SITE

There are no login forms, SSN fields, or application uploads. The site prepares you for conversations with real lenders.

DOES NOT REPLACE A LOAN OFFICER

Use Lenni to build a shortlist and walk in prepared. The bank still underwrites your specific deal.

COUNTY / PARCEL RECORDS

The Land info tab shows placeholders for public records. Production would connect to county APIs — not live today.

BORROWER PROFILE SAVES

The My info tab is a UI stub. Your details are not saved between sessions yet.

Match my deal — running the full engine locally

TWO MODES: FULL API vs BROWSER FALLBACK

On the live S3 site, "Match my deal" uses a browser-based keyword fallback when the Python API is not running. That fallback still ranks real banks from embedded data — it never makes up bank names.

For the full matching engine (same logic as production will use), run the API on your laptop:

TERMINAL 1 — Start the API
cd ONLY_TEXAS_SINCE_2025
source ../.venv/bin/activate
python run_match_api.py
→ Listens at http://127.0.0.1:8000

TERMINAL 2 — Serve the static site
cd borrower_site
python -m http.server 8080
→ Open http://localhost:8080

OPTIONAL — OpenAI enrichment
Set OPENAI_API_KEY in .env for smarter text extraction. Without it, keyword rules still work.

QUICK API TEST (no browser needed)
curl -X POST http://127.0.0.1:8000/api/match \
-H 'Content-Type: application/json' \
-d '{"text":"12.4 acre land near Brenham TX \$849k hold","use_llm":false}{'

PRODUCTION STATUS

The API runs locally today. Hosting it on AWS (Lambda + API Gateway or similar) and pointing the live site at it via window.LENNI_API_BASE is the recommended next step. Until then, the live site uses the browser fallback.

SEO, search engines, and AI discoverability

We built the site to be found — by Google, by Bing, and by AI assistants that index llms.txt.

SITEMAP.XML — 470 URLs

Every bank profile, loan guide, insight, scenario, city page, and market page.
Submitted automatically to crawlers via robots.txt.

ROBOTS.TXT

Allows all crawlers. Points to the sitemap.

LLMS.TXT and LLMS-FULL.TXT

Machine-readable indexes designed for LLM crawlers (the llms.txt convention). The full version lists all 351 bank profile URLs.

JSON DATA FEEDS (data/ folder)

banks.json — complete bank records for integrations
loan_products.json — full taxonomy
glossary.json — term definitions
market_insights.json — stats and insight summaries

PER-PAGE SEO

Unique title and meta description on every page.
Canonical URLs pointing to the S3 website endpoint.
Open Graph tags for social sharing.
JSON-LD structured data (BankOrCreditUnion on profiles, Article on guides).

INTERNAL LINKING

Scenario stories link to insights. Insights link to the playbook. Bank profiles link to loan type pages. The site is designed as a web of related content, not isolated pages.

How the website is hosted — overview

The Lenni Borrower site is a static website — plain HTML, CSS, and JavaScript files with no server-side code running in production. That choice was deliberate: it is fast, cheap, secure (no database to hack), and easy for search engines to crawl.

HOSTING PROVIDER: Amazon Web Services (AWS) S3 Static Website Hosting
LIVE URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com>
BUCKET NAME: lenni-borrower
AWS REGION: us-east-2 (US East — Ohio)
AWS ACCOUNT ID: 629603795749

HOW THE SITE GETS TO PRODUCTION TODAY

1. Run `build_borrower_site.py` locally → generates HTML/CSS/JS in `borrower_site/`
2. Run `aws s3 sync borrower_site/ s3://lenni-borrower/ --region us-east-2 --delete`
3. Visitors open the S3 website endpoint directly — no CDN, no custom domain, no HTTPS

WHAT IS NOT CONFIGURED YET (important to know)

- CloudFront (CDN) — not set up; no HTTPS on the live URL
- ACM SSL certificate — not issued for this site
- Route 53 custom DNS — `lenni.io` DNS exists in AWS but the borrower site does not use a custom domain like `borrower.lenni.io` yet
- CI/CD pipeline — deploys are manual via AWS CLI
- Production API — deal matcher runs locally only

The site is accessed directly via the S3 website endpoint over HTTP. Browsers show a "Not secure" label — that is expected and acceptable for a read-only demo site with no login forms. For public marketing long-term, CloudFront + HTTPS is the recommended next step.

The sections immediately following this one explain each "not configured" item in detail — what it means, why it matters, and what a production upgrade would look like.

HTTP, HTTPS, and the Not secure browser warning

S3 static website hosting serves pages over HTTP only. There is no built-in TLS/SSL on the S3 website endpoint. That single limitation drives most of the other "not configured yet" items in this guide.

HTTP vs HTTPS — what is the difference?

HTTP — Unencrypted web traffic. URL starts with `http://`. Browsers may show "Not secure" in the address bar.

HTTPS — Encrypted web traffic (TLS). URL starts with `https://`. Browsers show a padlock when the certificate is valid.

With HTTP, anyone on the same network could see which pages you load (a privacy concern, not a data breach on our site).

With HTTPS, content is encrypted between the browser and the server. Users and search engines expect it for public marketing sites.

WHY CHROME SHOWS "NOT SECURE" ON `http://lenni-borrower.s3-website.us-east-2.amazonaws.com`

You are using the S3 website endpoint over plain HTTP. The browser is correctly warning that traffic is not encrypted. This is not a bug — it is how S3 website hosting works without CloudFront in front.

WHY THIS IS ACCEPTABLE FOR THE DEMO TODAY

The borrower site is read-only. There are no login forms, no passwords, no payment fields, and nowhere to enter sensitive personal data. Visitors only download public HTML, CSS, JavaScript, and JSON files. The main risk of HTTP here is privacy (someone could see what pages you browse) or, in theory, page tampering in transit — both low priority for a static research demo.

WHEN YOU NEED HTTPS

HTTP, HTTPS, and the Not secure browser warning (continued)

For long-term public marketing under the lenni.io brand, HTTPS is standard. It removes the "Not secure" warning, enables a friendly URL like borrower.lenni.io, and is a prerequisite for treating the site as production-grade. The fix is CloudFront in front of S3 plus an ACM certificate — not a change to the S3 bucket itself.

CloudFront (CDN) — what it is and why we have not set it up

WHAT CLOUDFRONT IS

Amazon CloudFront is AWS's Content Delivery Network (CDN). Instead of every visitor fetching files directly from the lenni-borrower bucket in Ohio (us-east-2), CloudFront:

- Caches copies of your files at edge locations worldwide (Dallas, London, Tokyo, etc.)
- Serves requests from the nearest edge — faster for visitors far from Ohio
- Sits in front of S3 as the public entry point to the website
- Can terminate HTTPS using an SSL certificate — which S3 website hosting alone cannot do

WHAT "NOT SET UP" MEANS FOR THIS PROJECT

There is no CloudFront distribution pointing at lenni-borrower.s3-website.us-east-2.amazonaws.com. Users go straight to S3. Consequences:

- No CDN edge caching or global performance boost
- No HTTPS termination layer
- No place to attach a custom domain name (that is almost always done on CloudFront, not on S3 directly)

TYPICAL ARCHITECTURE ONCE CLOUDFRONT EXISTS

Browser → HTTPS → CloudFront (edge caches worldwide) → HTTP fetch → S3 website endpoint

CloudFront talks to S3 on the backend; visitors only see CloudFront. You configure the origin as the S3 website endpoint (lenni-borrower.s3-website.us-east-2.amazonaws.com), not the REST API endpoint (lenni-borrower.s3.amazonaws.com) — they behave differently.

SETTINGS TO USE WHEN YOU BUILD IT

Origin: lenni-borrower.s3-website.us-east-2.amazonaws.com

Viewer protocol policy: Redirect HTTP to HTTPS

Alternate domain name (CNAME): borrower.lenni.io (after DNS and certificate are ready)

SSL certificate: from ACM in us-east-1 (required for CloudFront even though the bucket is in us-east-2)

ACM SSL certificates — what they are and why none is issued yet

WHAT ACM IS

AWS Certificate Manager (ACM) provides free SSL/TLS certificates for use on AWS services — especially CloudFront and load balancers. A certificate proves to browsers that a hostname (for example `borrower.lenni.io`) really belongs to you and enables the padlock in the address bar.

WHAT A CERTIFICATE DOES

When a visitor opens `https://borrower.lenni.io`, the browser checks the certificate. If it is valid and matches the domain, the connection is encrypted and the padlock appears. Without a certificate, HTTPS cannot work on that hostname.

WHY NO CERTIFICATE IS ISSUED FOR THE BORROWER SITE YET

Certificates are requested for specific hostnames. Today the site is accessed via the auto-generated S3 hostname (`lenni-borrower.s3-website.us-east-2.amazonaws.com`). You could theoretically certificate that name, but the normal path is:

1. Choose a branded subdomain (`borrower.lenni.io` or similar)
2. Request a certificate in ACM for that subdomain
3. Prove domain ownership (DNS validation via Route 53 is easiest since `lenni.io` already uses Route 53)
4. Attach the certificate to a CloudFront distribution

IMPORTANT AWS DETAIL

CloudFront requires certificates to be in `us-east-1` (N. Virginia), even when your S3 bucket lives in `us-east-2` (Ohio). This confuses many first-time setups — request the cert in the right region before attaching it to CloudFront.

UNTIL THAT CHAIN EXISTS

There is no SSL for the borrower site. The live URL stays HTTP-only on the S3 endpoint. That is expected for the current minimal demo setup.

Route 53 custom DNS — lenni.io exists but the borrower site does not use it

WHAT ROUTE 53 IS

Amazon Route 53 is AWS's DNS (Domain Name System) service. DNS translates human-readable names like `borrower.lenni.io` into addresses and AWS resources that browsers can reach.

WHAT YOU HAVE TODAY

The `lenni.io` domain's nameservers point to Route 53 in AWS (not GoDaddy's DNS panel for record edits). DNS for the Lenni brand is already managed in AWS.

WHAT YOU DO NOT HAVE YET

A DNS record that sends a subdomain like `borrower.lenni.io` to the borrower website. Visitors must use the long S3 URL:

`http://lenni-borrower.s3-website.us-east-2.amazonaws.com`

That works, but it is not branded, is hard to share, and cannot use HTTPS without CloudFront in the middle.

WHAT "WIRED UP" WOULD LOOK LIKE

1. Request an ACM certificate for `borrower.lenni.io` (validated via Route 53)
2. Create a CloudFront distribution with alternate domain name (CNAME) = `borrower.lenni.io`
3. Create a Route 53 A record (Alias) pointing `borrower.lenni.io` to the CloudFront distribution

Then `https://borrower.lenni.io` becomes the friendly, branded URL.

WHY DNS IS SEPARATE FROM S3

S3 bucket names are globally unique and auto-generated for website endpoints. Custom domains almost always go through CloudFront plus Route 53, not by pointing DNS directly at the raw bucket hostname. The same pattern was discussed for Convey app hosting (`convey.lenni.io`) but has not been applied to the borrower S3 site yet.

CI/CD pipeline vs manual AWS CLI deploys

WHAT CI/CD MEANS

Continuous Integration / Continuous Deployment — automation that builds and deploys the site when you push code (for example a GitHub Action on every merge to main), without a human running commands on a laptop.

WHAT WE DO TODAY (MANUAL)

Every production update requires a developer to run two commands on a Mac:

```
python ONLY_TEXAS_SINCE_2025/build_borrower_site.py  
aws s3 sync borrower_site/ s3://lenni-borrower/ --region us-east-2 --delete
```

Credentials come from IAM user aditya-cli, scoped by the LenniBorrowerS3Deploy policy (ListBucket, GetObject, PutObject, DeleteObject on lenni-borrower only).

MANUAL DEPLOY — TRADEOFFS

Pros: Simple, full control, no pipeline to maintain, fine for infrequent content updates.

Cons: Depends on one machine and local AWS config; easy to forget a step; no automatic deploy on git push.

CI/CD — WHAT "NOT CONFIGURED" MEANS

No GitHub Action (or similar) runs build_borrower_site.py and aws s3 sync automatically. Proposed future setup:

GitHub push to main → GitHub Actions runner → build → aws s3 sync
Requires AWS_ACCESS_KEY_ID and AWS_SECRET_ACCESS_KEY stored as GitHub repository secrets.

Not implemented as of June 2026. Every production update is a deliberate manual run.

Production API — why the deal matcher runs locally only

TWO DIFFERENT PIECES IN THE STACK

Borrower static site — HTML, CSS, JavaScript. Bank profiles, guides, workspace UI. Hosted on S3 (public, Ohio). URL: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com>

Deal matcher API — Python FastAPI backend (`api/main.py`, `run_match_api.py`). Ranks banks, builds preparation roadmaps from deal text. Runs on your laptop today — typically `http://127.0.0.1:8000`

HOW THE WORKSPACE USES THE API

The home page "Match my deal" feature calls an API base URL (`window.LENNI_API_BASE` in the built site). When the API is running locally, full matching works. When it is not, the live S3 site falls back to browser-based keyword matching — still grounded in real bank data from `banks.json`, never hallucinated bank names.

WHAT "RUNS LOCALLY ONLY" MEANS FOR PUBLIC VISITORS

Anyone on the internet who opens only the S3 URL gets the static site. They do not get a hosted match API unless you deploy FastAPI to AWS (options documented: Lambda + API Gateway, or a small EC2/ECS service) and set `LENNI_API_BASE` in the built HTML to that production URL.

CORS in `api/main.py` already includes the S3 website origin — the backend is ready to accept requests from the static site; it simply is not deployed to a public endpoint yet.

PRODUCTION UPGRADE STEPS (SUMMARY)

1. Deploy `api/main.py` to Lambda + API Gateway, or EC2/ECS
2. Set `window.LENNI_API_BASE` in `index.html` (via `build_borrower_website.py`) to the production API URL
3. Rebuild and `aws s3 sync`
4. Optionally put the API behind its own subdomain (`api.lenni.io`) with HTTPS via CloudFront or API Gateway

Current architecture vs production target

CURRENT SETUP (MINIMAL DEMO — WHAT EXISTS TODAY)

Developer machine

- build_borrower_site.py → borrower_site/
- aws s3 sync → S3 bucket lenni-borrower (us-east-2)

Visitor

- HTTP → <http://lenni-borrower.s3-website.us-east-2.amazonaws.com>
- (direct S3 website endpoint, no CDN, no custom domain, no encryption)

Deal matcher API

- localhost:8000 only (not reachable by public internet visitors)

PRODUCTION TARGET (NOT BUILT YET)

Visitor

- HTTPS → borrower.lenni.io
- CloudFront (CDN + ACM certificate)
- S3 website origin

Visitor using "Match my deal"

- HTTPS → api.lenni.io (or similar)
- API Gateway / Lambda / ECS
- match_deal logic

Developer

- git push to main
- GitHub Actions → build + aws s3 sync (CI/CD)

WHY CLOUDFRONT + HTTPS IS THE RECOMMENDED NEXT STEP FOR THE STATIC SITE

For the read-only demo, HTTP on S3 is a reasonable shortcut — cheap and few moving parts.

For public marketing long-term, CloudFront + HTTPS provides:

- Trust — padlock, no "Not secure" warning
- Brand — borrower.lenni.io instead of an AWS hostname
- Performance — CDN edge caching worldwide
- SEO and sharing — canonical <https://> URLs (sitemap and canonicals today point at the HTTP S3 endpoint)
- Foundation for API hosting — same custom-domain + TLS pattern applies when the deal matcher is deployed

RECOMMENDED ORDER OF OPERATIONS

Current architecture vs production target (continued)

1. ACM certificate in us-east-1 for borrower.lenni.io
2. CloudFront distribution → S3 website origin → redirect HTTP to HTTPS
3. Route 53 alias record → CloudFront
4. Rebuild site with https:// canonicals and sitemap URLs
5. Separately: deploy deal matcher API and set LENNI_API_BASE
6. Optionally: GitHub Actions for automated s3 sync

QUICK GLOSSARY (INFRASTRUCTURE TERMS)

S3 — File storage; hosts static HTML. Static website hosting serves index.html for web requests.

HTTP — Unencrypted protocol. What S3 website endpoints use today.

HTTPS — Encrypted protocol. Requires TLS certificate via ACM on CloudFront.

CloudFront — AWS CDN. Cache + HTTPS in front of S3.

ACM — AWS Certificate Manager. Free SSL certificates for CloudFront and load balancers.

Route 53 — AWS DNS. Maps lenni.io hostnames to CloudFront and other resources.

IAM / AWS CLI — Identity and command-line tool for manual s3 sync deploys.

CI/CD — Automated build and deploy on git events (not set up yet).

AWS S3 bucket — every setting chosen

BUCKET CREATION (one-time setup, June 2026)

Bucket name: lenni-borrower

S3 bucket names are globally unique across all AWS accounts. "lenni-borrower" was available and descriptive.

AWS Region: us-east-2 (Ohio)

Originally the setup guide suggested us-east-1 (N. Virginia), but this bucket was created in us-east-2. The website endpoint format reflects that:

<http://lenni-borrower.s3-website.us-east-2.amazonaws.com>

All deploy commands must include `--region us-east-2`.

Object Ownership: Bucket owner preferred (default)

The account that owns the bucket controls object ACLs.

BLOCK PUBLIC ACCESS — all four settings DISABLED

For a public website, objects must be readable by anyone on the internet. In the S3 console under Permissions → Block public access:

☐ Block all public access — UNCHECKED (all four sub-options unchecked)

AWS shows a warning when you do this. That is expected for public static sites.

BUCKET POLICY — public read for website objects

A bucket policy grants `s3:GetObject` to Principal `"*"` (everyone) for all objects:

```
{
  "Version": "2012-10-17",
  "Statement": [{
    "Sid": "PublicReadGetObject",
    "Effect": "Allow",
    "Principal": "*",
    "Action": "s3:GetObject",
    "Resource": "arn:aws:s3::lenni-borrower/*"
  }]
}
```

This allows browsers to download HTML, CSS, JS, and JSON files. It does NOT grant write access. Only authenticated IAM users with `PutObject` permission can upload.

STATIC WEBSITE HOSTING — enabled

In S3 console → bucket lenni-borrower → Properties → Static website hosting → Enable.

AWS S3 bucket — every setting chosen (continued)

Hosting type: Host a static website

Index document: index.html

Error document: (optional — can leave blank or set to index.html for SPA-style routing)

After enabling, AWS assigns the website endpoint URL (different from the REST API endpoint). Always use the website endpoint for browsing, not `s3://lenni-borrower/index.html` directly.

IAM access — who can deploy and how

Two IAM users are documented in project sessions:

CONSOLE LOGIN (human browsing AWS)

Account ID: 629603795749

IAM username: adityaalldunkin

Sign-in URL: <https://629603795749.signin.aws.amazon.com/console>

CLI DEPLOY USER (programmatic sync)

IAM username: aditya-cli

Access key type: Programmatic access (Access Key ID + Secret Access Key)

Configured via: aws configure

DEPLOY IAM POLICY (custom policy: LenniBorrowerS3Deploy)

Scoped to the lenni-borrower bucket only — not full AWS admin.

Permissions granted:

s3:ListBucket on arn:aws:s3:::lenni-borrower

s3:GetObject on arn:aws:s3:::lenni-borrower/*

s3:PutObject on arn:aws:s3:::lenni-borrower/*

s3:DeleteObject on arn:aws:s3:::lenni-borrower/*

ListBucket is needed for aws s3 sync to compare local vs remote.

DeleteObject is needed when using --delete flag to remove stale files.

The deploy user does NOT have s3:GetBucketWebsite, CloudFront, or Route53 permissions — those were configured separately in the console during initial setup.

AWS CLI INSTALLATION

AWS CLI v2 installed on macOS via the official .pkg installer (AWSCLIV2.pkg).

Verify: aws --version → aws-cli/2.x.x

AWS CLI CONFIGURATION

aws configure

Default region name: us-east-2

Default output format: json

Access Key ID: (from IAM security credentials tab)

Secret Access Key: (shown once at key creation — store securely)

Deploy procedure — step by step

Every site update follows the same two-step process: build locally, sync to S3.

STEP 1 — BUILD THE SITE LOCALLY

```
cd /Users/adityarajiv/Documents/ffiec-cdr
source .venv/bin/activate
python ONLY_TEXAS_SINCE_2025/build_borrower_site.py
```

This regenerates the entire `borrower_site/` folder:
470 HTML pages, `sitemap.xml`, `robots.txt`, `llms.txt`, JSON data files.
Typical build time: 2-5 seconds.

Optional before build:

```
python ONLY_TEXAS_SINCE_2025/scrape_bank_websites.py # refresh bank contact data
python ONLY_TEXAS_SINCE_2025/extract_texas_loans.py --summary # refresh FFIEC data
```

STEP 2 — SYNC TO S3

```
aws s3 sync borrower_site/ s3://lenni-borrower/ --region us-east-2 --delete
```

What this command does:

- `borrower_site/` — local source folder (note trailing slash)
- `s3://lenni-borrower/` — destination bucket root (note trailing slash)
- `--region us-east-2` — must match bucket region
- `--delete` — removes S3 objects that no longer exist locally (keeps bucket in sync)

Typical sync time: 10-30 seconds for ~478 objects (~7 MB total).

STEP 3 — VERIFY

Open <http://lenni-borrower.s3-website.us-east-2.amazonaws.com> in a browser.
Or: `aws s3 ls s3://lenni-borrower/ --recursive --region us-east-2 | wc -l`

DEPLOY HISTORY

- 2026-06-10 — Initial single-file upload (2026-06-07-lenni-borrower-experience.html)
- 2026-06-14 — Full multi-page site, 435 objects
- 2026-06-18 — Bank enrichment redeploy
- 2026-06-24 — Content expansion, 478 objects

Common deployment problems we hit

404 NoSuchKey for index.html

Cause: The `borrower_site/` folder was uploaded as a subfolder inside the bucket, so S3 looked for `lenni-borrower/index.html` but the file was at `lenni-borrower/borrower_site/index.html`.

Fix: Sync the contents of `borrower_site/` to the bucket root, not the folder itself. The sync command above does this correctly because of the trailing slash on `borrower_site/`.

403 Forbidden

Cause: Bucket policy missing, or Block Public Access still enabled, or index document not set in static website hosting.

Fix: Verify all four Block Public Access checkboxes are off. Verify bucket policy grants `s3:GetObject` to `"*"`. Verify static website hosting is enabled with `index.html`.

"Not secure" in Chrome

Cause: S3 website endpoints serve HTTP only, not HTTPS. There is no TLS on the S3 website endpoint itself — browsers correctly label the connection as unencrypted.

Context: Acceptable for this read-only demo (no login, no passwords, no payment forms). Visitors only download public HTML.

Fix for production: Add CloudFront in front of S3, request an ACM certificate (us-east-1) for `borrower.lenni.io`, point Route 53 at CloudFront, and set viewer policy to redirect HTTP to HTTPS. See the detailed infrastructure sections earlier in this guide.

aws: command not found

Cause: AWS CLI not installed or not on PATH.

Fix: Install AWS CLI v2 via `.pkg` installer; restart terminal.

AccessDenied on sync

Cause: IAM user lacks `PutObject`, `DeleteObject`, or `ListBucket` on the bucket.

Fix: Attach `LenniBorrowerS3Deploy` policy (see previous section).

Common deployment problems we hit (continued)

Sync interrupted / partial deploy

Cause: Network interruption or approval timeout during long sync.

Fix: Re-run the same sync command. aws s3 sync is idempotent — it resumes where it left off.

Future hosting upgrades — action checklist

The current setup is intentionally minimal. The sections titled "HTTP, HTTPS, and the Not secure browser warning" through "Current architecture vs production target" explain each gap in plain English. This section is the condensed action checklist for when you are ready to build.

HTTPS VIA CLOUDFRONT

1. Request ACM certificate in us-east-1 for borrower.lenni.io (DNS validation via Route 53)
2. Create a CloudFront distribution
3. Origin: lenni-borrower.s3-website.us-east-2.amazonaws.com (website endpoint, not REST endpoint)
4. Viewer protocol policy: Redirect HTTP to HTTPS
5. Attach the ACM certificate; add borrower.lenni.io as alternate domain name (CNAME)
6. Create Route 53 A record (Alias) pointing borrower.lenni.io to the CloudFront distribution
7. Rebuild the site and update sitemap and canonical URLs from http:// to https://

CUSTOM DOMAIN VIA ROUTE 53

The lenni.io domain uses AWS Route 53 nameservers (confirmed in a separate session — not GoDaddy DNS for record edits).

Subdomains discussed for Lenni products include borrower.lenni.io (this site) and convey.lenni.io (Convey app). Neither is wired to the lenni-borrower S3 bucket yet.

DEAL MATCHER API IN PRODUCTION

Options documented: AWS Lambda + API Gateway, or a small EC2/ECS service.

Frontend change: set window.LENNI_API_BASE in index.html to the production API URL.

CORS origins already include the S3 website URL in api/main.py.

Until deployed, "Match my deal" on the live site uses browser keyword fallback only.

Future hosting upgrades — action checklist (continued)

CI/CD PIPELINE

Proposed: GitHub Action on push to main → build_borrower_site.py → aws s3 sync.

Requires: AWS_ACCESS_KEY_ID and AWS_SECRET_ACCESS_KEY in GitHub secrets.

Not implemented as of June 2026 — all deploys remain manual via AWS CLI.

What the site does not do — honest limitations

We would rather be clear about gaps than pretend the site is something it is not.

NO INTEREST RATES. Call Reports do not include pricing. Every rate is negotiated.

NO APPROVAL ODDS. Portfolio percentage is a fit signal, not a credit decision.

NO ONLINE APPLICATIONS. You contact the bank through their website or phone.

NO LOAN OFFICER DIRECTORY. We have phones for 208 banks from website scraping, but not named lenders.

QUARTERLY DATA LAG. The latest filing period is shown on every page. Banks can change strategy between quarters.

UNCLASSIFIED BALANCES. Some Call Report lines do not map cleanly to our eleven categories. They appear as "Unclassified" — not agriculture, not a separate product.

SCENARIO STORIES ARE EDUCATIONAL. They illustrate how to use the data. They are not financial advice.

HTTP ONLY. The live URL is not encrypted. Browsers show "Not secure" — expected for S3 website hosting without CloudFront. Do not enter passwords or sensitive personal data on the site — there is nowhere to enter them anyway. See the infrastructure sections in this guide for the CloudFront + HTTPS upgrade path.

Step-by-step: your first hour on the site

SCENARIO A — You know you need a multifamily bridge loan in Dallas.

1. Go to <http://lenni-borrower.s3-website.us-east-2.amazonaws.com>
2. Click Loan Types → Multifamily → Bridge guide
3. Read "What to prepare" — gather rent roll, renovation budget, purchase contract
4. Scroll to the bank table — note the top 5 banks by multifamily %
5. Read Insight I-04 (specialist targeting) and I-12 (outreach planning)
6. Open 3 bank profiles — check mix bars and Dallas branches
7. Use the opening script from the bridge guide on your first call

SCENARIO B — You have a LoopNet listing but are not sure of the loan type.

1. Copy the listing description (price, city, property type, size) from LoopNet — paste into "Match my deal" (a URL alone is not enough yet; see Match my deal sections)
2. Review matched loan products in the workspace
3. Click the top match to open the sub-type guide
4. Follow the four-step preparation roadmap
5. Call the top 3 recommended banks using the opening script from the guide

SCENARIO C — You want to understand the Texas market before calling anyone.

1. Read Texas Market Overview
2. Check Product Availability for your category
3. Browse the ICP Bank Directory
4. Read the Borrower Playbook cover to cover (~15 minutes)
5. Pick the scenario story closest to your deal

SCENARIO D — Someone sent you a bank name and you want to vet them.

1. Search the bank on Find Banks or go to </banks/{id}-{name}.html>
2. Study the portfolio mix — is your product a major line?
3. Check branches in your market
4. Compare to 2 competitors from the same loan type ranking table

For developers — rebuilding and extending the site

SOURCE CODE LOCATION

/Users/adityarajiv/Documents/ffiec-cdr/ONLY_TEXAS_SINCE_2025/

KEY FILES TO EDIT

content/loan_products.yaml — all loan guide copy (7 parents, 27 sub-types)

content/borrower_scenarios.yaml — 12 scenario stories

borrower_content_engine.py — market pages, insights, scenarios, playbook

build_borrower_site.py — main orchestrator (banks, cities, sitemap, deploy)

build_borrower_website.py — interactive index.html template

loan_mix.py — FFIEC line item → display category mapping

bank_enrichment.py — website scrape merge logic

ARCHITECTURE

No template engine (Jinja, etc.). All HTML is Python f-strings.

SPA (index.html) embeds all bank data in a JavaScript DATA array (~1 MB).

Static SEO pages are separate HTML files per bank, city, guide.

patch_index_with_data() links SPA bank views to static profile pages.

ADD A NEW LOAN SUB-TYPE

1. Add entry under the appropriate parent in loan_products.yaml
2. Run build_borrower_site.py
3. aws s3 sync ...

ADD A NEW SCENARIO STORY

1. Add entry to content/borrower_scenarios.yaml
2. Rebuild and deploy

MASTER SESSION LOG

session.md at repo root — full project history June 7-24, 2026

S3 bucket folder structure (what lives where)

After a successful deploy, the lenni-borrower bucket contains 478 objects organized like this:

lenni-borrower/ (bucket root — NOT a borrower_site/ subfolder)

- ├─ index.html Main interactive app (~1.1 MB)
- ├─ styles.css Shared CSS for static pages
- ├─ robots.txt Search engine directives
- ├─ sitemap.xml 470 URLs
- ├─ llms.txt AI crawler index (summary)
- ├─ llms-full.txt AI crawler index (all bank URLs)
- ├─ banks/ 351 bank profile HTML files
- ├─ cities/ 40 city landing pages
- ├─ market/ Texas overview, availability, asset bands, ICP directory
 - ├─ icp-banks/ Paginated ICP lists (page-2.html, page-3.html, ...)
- ├─ insights/ 12 insight pages + index
- ├─ scenarios/ 12 scenario stories + index
- ├─ guides/ playbook, checklist, glossary, FAQ, methodology
- ├─ loan-types/ 7 parent hubs + 27 sub-type guides in subfolders
- ├─ data/ banks.json, loan_products.json, glossary.json, market_insights.json
- └─ js/ match-client.js, workspace.js

CRITICAL: index.html must sit at the bucket root. The sync command uses a trailing slash on borrower_site/ so contents land at root, not inside a nested folder. This was the root cause of an early 404 error during initial setup.

Bank website enrichment — the human layer on top of data

Starting June 18, 2026, bank profile pages include information scraped from each bank's public website. This sits on top of FFIEC/FDIC data — it does not replace it.

WHAT WAS SCRAPED

344 Texas banks had a website URL in FDIC records.
257 returned usable content after automated fetching.
255 were matched to bank profiles and published.

WHAT YOU GET ON ENRICHED PROFILES

About this bank — a short excerpt from the bank's meta description, with source URL and capture date.
Contact and hours — phone numbers (208 banks), email addresses (44 banks), hours text when found.
On the bank's website — deep links to commercial banking, contact, FAQ, and apply pages when discoverable.
FAQ excerpts — only when the bank's site uses schema.org FAQPage JSON-LD (rare — just 2 banks).

HOW SCRAPING WORKS

Script: `scrape_bank_websites.py`
Fetches homepage plus one subpage (FAQ, commercial, or contact link if found).
8 concurrent workers; full run takes about 54 seconds.
User-Agent identifies the request as Lenni borrower research.
Output: `enrichment/bank_website_enrichment.json` keyed by Federal Reserve RSSD ID.

LEGAL APPROACH

Short excerpts only. Full answers link to the bank's site. Capture date shown for freshness. `review_status`: auto on all records — human QA recommended for ICP banks before sales use.

TO REFRESH

```
python ONLY_TEXAS_SINCE_2025/scrape_bank_websites.py
python ONLY_TEXAS_SINCE_2025/build_borrower_site.py
aws s3 sync borrower_site/ s3://lenni-borrower/ --region us-east-2 --delete
```

Interactive features on the home page

Beyond "Match my deal," the home page includes several tools worth knowing about.

FIND BANKS VIEW

Filter 351 banks by metro area, asset size, and loan specialty. Sort by assets or portfolio concentration. Click any bank to open its full profile page.

LOAN TYPES VIEW

Seven category cards with sub-type counts. Drill into a category to see sub-type chips, a plain-English explanation, and a live ranking of specialist banks. Links to full static guide pages for SEO.

AI TERMINAL

A chat-style interface where you type questions in plain English. Today it uses keyword routing — if you mention "apartment" and "bridge," it routes toward multifamily content. It is a stub for a fuller roadmap/chat experience planned with Monday.com data and call recording insights. Not a replacement for professional advice.

PORTFOLIO CALCULATOR (on loan product views)

Enter a loan amount and see how it compares to typical bank exposure in that category. Helps answer "is my deal big enough to matter to this bank?"

STATIC VS INTERACTIVE

The interactive app is convenient for exploration. Static HTML pages (banks/, loan-types/, insights/) are better for Google indexing, sharing direct links, and printing. The build script links them together — clicking a bank in the app opens its static profile.

Post-deploy verification checklist

Run through this list after every aws s3 sync to confirm the deploy worked.

BROWSER CHECKS

- ☐ `http://lenni-borrower.s3-website.us-east-2.amazonaws.com` loads the home page (not 403 or 404)
- ☐ Click Texas Market → overview page loads
- ☐ Click Insights → 12 cards visible
- ☐ Click a bank profile → portfolio mix chart renders
- ☐ Click a loan sub-type guide (e.g. multifamily/bridge) → bank table present

CLI CHECKS

- ☐ `aws s3 ls s3://lenni-borrower/ --region us-east-2` → shows `index.html` at root
- ☐ `aws s3 ls s3://lenni-borrower/insights/ --region us-east-2` → 13 files
- ☐ `aws s3 ls s3://lenni-borrower/market/ --region us-east-2` → overview + ICP pages
- ☐ `aws s3 ls s3://lenni-borrower/ --recursive --region us-east-2 | wc -l` → ~478 objects

DATA FRESHNESS

- ☐ Home page banner shows period ending 12/31/2025
- ☐ `sitemap.xml` dated today (check Last modified in S3 console)
- ☐ `data/banks.json` file size reasonable (~few MB)

COMMON FAILURES

404 on home → `index.html` not at bucket root (see deployment troubleshooting section)
403 on pages → bucket policy or public access block misconfigured
Old content showing → hard-refresh browser (Cmd+Shift+R) or check sync actually ran

Glossary and FAQ pages — when to use them

GLOSSARY (<http://lenni-borrower.s3-website.us-east-2.amazonaws.com/guides/glossary.html>)

If you are reading a bank profile and see "RCON1460" or "C&I" or "RCON2122" and are not sure what it means, open the glossary. It translates Federal Reserve regulatory codes into plain English.

Examples:

RCON2122 — Total loans and leases (the denominator for all portfolio percentages)

RCON1460 — Multifamily real estate (5+ unit apartments)

RCONF161 — Investor income property (non-owner-occupied CRE)

RCONF160 — Owner-occupied commercial real estate

RCON1766 — Commercial and industrial (business) loans

The glossary is built from `texas_loan_products_mdrm_catalog.csv` — 24,000+ MDRM code definitions filtered to terms that appear in Texas Call Report data.

FAQ (<http://lenni-borrower.s3-website.us-east-2.amazonaws.com/guides/faq.html>)

Eight questions covering the basics: what the site is, where data comes from, whether you can apply for a loan here, what a community bank is, and the difference between HQ city and branch footprint. Send this link to anyone who asks "what is Lenni Borrower?"
