2026-06-14

FFIEC CDR / Texas Community Bank Index / lenni-borrower S3

Companion: session-notes_2026-06-14.md

Executive summary

This session span covers project status review, where loan product sub-types live on the live site, and a full implementation plan for a borrower chat interface powered by Monday.com data and call recordings. It also documents S3 deployment success (435 objects), AWS CLI setup, and GitHub push fixes (excluding 805 MB texas_loans_labeled.csv).

1. Developments so far — what has been built

1.1 TEXAS FFIEC DATA PIPELINE (FOUNDATION)

- Texas-only Call Report extract under ONLY_TEXAS_SINCE_2025/
- Bank profiles CSV with loan mix, ICP flags, portfolio percentages
- MDRM catalog: texas_loan_products_mdrm_catalog.csv
- FDIC enrichment: institutions.csv, locations.csv (websites, branches, HQ)
- EDA outputs: PDF reports, prospect lists, market segment CSVs
- 50-page comprehensive EDA guide PDF

1.2 BORROWER-FACING STATIC SITE (BORROWER_SITE/)

Asset: Count / detail
Total S3 objects: **435** (synced 2026-06-14)
Bank profile pages: 351
City landing pages: 40
Parent loan-type hubs: 7
Loan product **sub-type** guides: **27** (new)
Interactive index: Bank finder, loan browser, calculator, AI terminal stub
Guides: glossary, FAQ, methodology
SEO / LLM: `sitemap.xml`, `llms.txt`, `styles.css`

Generator: python ONLY_TEXAS_SINCE_2025/build_borrower_site.py
Deploy: aws s3 sync borrower_site/ s3://lenni-borrower/ --region us-east-2 --delete

1.3 LOAN PRODUCT SUB-TYPES (MAIN CONTENT TASK — COMPLETED)

Component: Path
Single source of truth: `ONLY\_TEXAS\_SINCE\_2025/content/loan\_products.yaml`
Loader module: `ONLY\_TEXAS\_SINCE\_2025/loan\_product\_loader.py`
Site builder: `ONLY\_TEXAS\_SINCE\_2025/build\_borrower\_site.py`
Interactive app data: `build\_borrower\_website.py` — `PRODUCTS` from YAML (no duplicate strings)
JSON for integrations: `borrower\_site/data/loan\_products.json`

Each sub-type page includes:

- Who it's for
- How community banks underwrite it
- What to prepare before calling a bank
- How to approach a bank (opening script + questions)
- Texas banks ranked by FFIEC portfolio share (auto-generated)
- FAQ, related sub-types, disclaimers

Parent categories and sub-type counts:

Parent: Sub-types
Multifamily: acquisition, refinance, bridge, value-add-rehab, permanent-takeout (5)
Investor CRE: office, retail, industrial, mixed-use, nnn (5)
Owner-occupied CRE: purchase, refinance, sba-504-paired (3)
Commercial construction: ground-up, major-rehab, land-development, lot-loans (4)
C&I / Business: working-capital-line, equipment, acquisition-finance, abl (4)
1-4 Family: portfolio-rental, investor-flip, second-lien (3)
Ag & Farmland: farmland-purchase, operating-line, ranch (3)

2. Tasks completed vs open

[DONE] COMPLETED

1. Texas FFIEC + FDIC data pipeline and EDA
2. Multi-page borrower static site (351 banks, cities, guides)
3. Loan product taxonomy YAML + 27 sub-type content pages
4. Site builder refactor (single source of truth)
5. Glossary fix
6. Git repo push (large file excluded)
7. S3 production deploy

[PARTIAL] PARTIALLY DONE

Item: Status

Monday.com integration: Documented (MCP + API); not wired to repo

AI terminal on site: Stub exists; no roadmap output

Deal matching: Keywords in YAML for routing; no `match\_deal()` API

HTTPS / CloudFront: Still HTTP S3 website endpoint

[TODO] NOT STARTED

1. Chat interface with Monday data + recordings → application roadmap
2. Listing → loan type + bank recommendation model (full)
3. Monday MCP connected in Cursor for live board access
4. sync_monday_exports.py
5. SME editorial review of sub-type copy (Doak / CLO)
6. Automated CI deploy script

3. Where to find loan sub-types on the website

3.1 PARENT HUB PAGES

URL pattern: /loan-types/{parent}.html

Category: URL

Multifamily: <http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/multifamily.html>

Investor CRE: [.../loan-types/investor-cre.html](http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/investor-cre.html)

Owner-occupied CRE: [.../loan-types/owner-occupied-cre.html](http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/owner-occupied-cre.html)

Commercial construction: [.../loan-types/commercial-construction.html](http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/commercial-construction.html)

C&I / Business: [.../loan-types/ci-business.html](http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/ci-business.html)

1-4 Family: [.../loan-types/residential-14.html](http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/residential-14.html)

Ag & Farmland: [.../loan-types/ag-farmland.html](http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/ag-farmland.html)

Each hub has a “Loan product sub-types” section with clickable cards.

3.2 SUB-TYPE GUIDE PAGES

URL pattern: /loan-types/{parent}/{subtype}.html

Examples:

- Multifamily bridge: [.../loan-types/multifamily/bridge.html](http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/multifamily/bridge.html)
- SBA 504: [.../loan-types/owner-occupied-cre/sba-504-paired.html](http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/owner-occupied-cre/sba-504-paired.html)
- Working capital LOC: [.../loan-types/ci-business/working-capital-line.html](http://lenni-borrower.s3-website.us-east-2.amazonaws.com/loan-types/ci-business/working-capital-line.html)

3.3 INTERACTIVE HOME PAGE

1. Open home → Loan Types
2. Category cards show sub-type count and Full guide →
3. Open a loan type → Learn tab → sub-type chip links
4. Search bar (e.g. “apartment bridge Dallas”) can route to sub-type static page

3.4 IN THE REPO (SOURCE)

What: Path

Edit content: ``ONLY_TEXAS_SINCE_2025/content/loan_products.yaml``

Generated HTML: ``borrower_site/loan-types/{parent}/{subtype}.html``

JSON: ``borrower_site/data/loan_products.json``

4. Chat interface task — implementation plan

Goal: Borrower describes deal in plain English → receives a roadmap (loan type, prep steps, banks, how to approach), grounded in Monday.com data and call recordings.

4.1 TARGET OUTPUT SCHEMA

```
```json
{
 "deal_summary": "48-unit apartment bridge in Dallas, ~$4M",
 "loan_product": { "parent": "multifamily", "subtype": "bridge" },
 "roadmap": [
 { "step": 1, "title": "Clarify hold period & exit", "detail": "..." },
 { "step": 2, "title": "Prepare rent roll + T-12", "detail": "..." },
 { "step": 3, "title": "Shortlist banks", "detail": "..." },
 { "step": 4, "title": "First call script", "detail": "..." }
],
 "recommended_banks": [{ "name": "...", "why": "14% multifamily portfolio" }],
 "disclaimer": "Portfolio data only — not an offer or approval."
}
```
```

4.2 ARCHITECTURE

```
```
Monday.com + recordings + loan_products.yaml + FFIEC banks.json
 → knowledge_base/ (JSON + transcript chunks)
 → match_deal() + build_roadmap()
 → Chat API (Lambda or FastAPI)
 → Enhanced AI terminal /chat on borrower site
```
```

Rules:

- Banks: only from FFIEC banks.json (never hallucinated)
- Journey copy: Monday + recordings + YAML
- Never quote rates or approval odds
- Bank is the hero; Lenni is the guide

4.3 PHASE 1 — MONDAY DATA (2-3 DAYS)

1. Connect Monday MCP in Cursor (OAuth)
2. Map boards: Loan Products, Underwriting, Loan Application Form, Lenders, Bridge/Hard Money
3. Export to ONLY_Texas_Since_2025/knowledge_base/monday_*.json
4. Later: sync_monday_exports.py for automation

4.4 PHASE 2 — RECORDINGS (3-5 DAYS)

1. Collect sales / education recordings
2. Transcribe (Whisper, Otter, Descript)
3. Chunk with metadata → recordings_chunks.jsonl
4. Extract journey_playbooks.json per sub-type (stages, actions, scripts)

4. Chat interface task — implementation plan (continued)

ld_roadmap.py

4. Wire AI terminal to roadmap logic

Pilot journeys: multifamily bridge, owner-occupied purchase, C&I working capital.

5. S3 deploy reference

```
```bash
cd /Users/adityarajiv/Documents/ffiec-cdr
source .venv/bin/activate
python ONLY_Texas_SINCE_2025/build_borrower_site.py
aws s3 sync borrower_site/ s3://lenni-borrower/ --region us-east-2 --delete
```
```

Verified 2026-06-14:

- 435 objects in bucket
- loan-types/multifamily/bridge.html and siblings present
- data/loan_products.json, glossary.json, banks.json present

6. Git / data hygiene

Do not commit to GitHub:

- texas_loans_labeled.csv (805 MB)
- ONLY_TEXAS_SINCE_2025/exports/ large extracts (gitignored)

Commit message reference: f54237e — Lenni borrower site, sub-types, tooling (large CSV excluded)

7. Key file index

Purpose: Path

Loan content (edit here): `ONLY\_TEXAS\_SINCE\_2025/content/loan\_products.yaml`

Regenerate site: `ONLY\_TEXAS\_SINCE\_2025/build\_borrower\_site.py`

Static output: `borrower\_site/`

Lenni context: `lenni\_context.txt`

Session notes (prior): `session-notes\_2026-06-07.md`

This session: `session-notes\_2026-06-14.md`

8. One-line project status

Done: Live Texas bank finder on S3 with 351 banks, 7 loan categories, 27 sub-type guides, FFIEC/FDIC data, glossary, repeatable build/deploy pipeline.

Next: Monday sync, match_deal() + roadmap builder, full chat interface, production HTTPS.

Generated 2026-06-14 for Lenni / ALL Dunkin FFIEC CDR project.
